# from our Senior Head Golf Pro...

Welcome all golfers and non-golfers to 2016!

The Incline Village Golf Course team is anxious to get our 2016 season underway. With cooperation from Mother Nature, we are targeting an opening date of mid-May for both the Championship and Mountain Golf Courses. In 2016, we are prepared to offer all of our customer favorite programs including Nine & Wine, Thrill & Grill, and Golf Equipment Demo Days to name a few. We are also eager to provide new golf programming focused on both the seasoned golfer and new golfers alike. Visit our website, [www.golfincline.com](http://www.golfincline.com), to stay up to date or sign up for our email club to get the latest information delivered to your inbox weekly.

In 2015, our business at The Grille at The Chateau was terrific (thank you very much!) such that, in 2016, we are going to build on that success by adding delicious new menu items, expanding our happy hour menu, and adding weekend breakfast to our tasty offerings. The Grille will open on the same day as the Championship Golf Course, weather permitting. We are looking forward to seeing you at the Grille to try our new food offerings prepared by our Executive Chef William Vandenburg and his outstanding team.

We hope that we can help make 2016 the year that you want to take your golf game to the next level!

*See you on the greens!*

Michael McCloskey, PGA

## DOG WASTE AFFECTS WATER QUALITY

Dog poop, not just an aesthetic issue, but a water quality issue. At Lake Tahoe and many other areas throughout the United States, people have become concerned about the effects of accumulated dog waste on water quality. Dog waste, like any waste, may contain a variety of microbes, some of which could cause disease. Examples of diseases that can potentially be transmitted from dogs to humans through feces include Salmonella, Giardia, E-Coli and Cryptosporidium.

Tahoe's water providers maintain a rigorous schedule of raw and finished water testing and use state-of-the-art disinfection processes to remove or inactivate pathogenic microbes, keeping your drinking water safe.

A study conducted by scientists at the UNR Cooperative Extension found that the drying out of dog feces kills off harmful bacteria's that are typically present in feces. These findings suggest that the risk of water contamination from dog feces is greatest during the cooler, wetter months when there is increased snowmelt and rainfall, coupled with lower evaporation rates. During these times it is important to pick up dog waste and dispose of it in the trash can or toilet to reduce the contamination potential on water quality.

Help spread the word and inform your friends and neighbors about the importance of picking up after your pooch!
