

MEMORANDUM

TO: Board of Trustees

THROUGH: Indra Winqest, District General Manager

FROM: Brad Underwood, Director of Public Works

SUBJECT: Discussion of Resolution 1903: A Resolution approving the amendments to the Sewer and Water Schedule of Service Charges (Ordinances 2 and 4 respectively) (Requesting Staff Member: Director of Public Works Brad Underwood)

RELATED STRATEGIC PLAN BUDGET INITIATIVE(S):

LONG RANGE PRINCIPLE #3 - FINANCE

The District will ensure fiscal responsibility and sustainability of service capacities through prudent fiscal management and maintaining effective financial policies for internal controls, operating budgets, fund balances, capital improvement and debt management.

Long-term Initiatives - 2. Prepare a five-year forecast for each major fund as a part of the annual budget development process.

LONG RANGE PRINCIPLE #5 - ASSETS AND INFRASTRUCTURE

The District will practice perpetual asset renewal, replacement and improvement to provide safe and superior long term utility services and recreation venues, facilities, and services.

Budgeted Initiatives for 2021 -2023 - B. Complete Utility Rate Study to ensure the Utility Fund meets budgetary and fund balance requirements.

RELATED DISTRICT POLICIES, PRACTICES, RESOLUTIONS OR ORDINANCES

Ordinance No. 2 – Sewer Ordinance
Ordinance No. 4 – Water Ordinance

DATE: June 14, 2023

I. RECOMMENDATION

That the Board of Trustees discuss and adopt Resolution No. 1903 for the proposed amendments to the Sewer and Water Schedule of Service Charges.

II. BACKGROUND

The District provides water and sewer utility services through its Utility Fund (Fund 200). These utility operations are supported through target annual revenues each year, collected from utility customers based on Board-approved rate schedules for each utility.

On November 22, 2022, staff executed a Professional Services Contract to HDR Engineering, Inc. to conduct the utility rate study for provision of water and sewer services. The study is intended to establish 5-year water and sewer utility rates for all customer types.

The rate study sets forth the appropriate rates for water and sewer service to meet revenue and expense requirements and to achieve the appropriate Fund Balance and Working Capital. The rate increases maintain the current rate structure and are necessary to fund the current, and future, operating and capital expenses. The following tables show the current versus proposed FY 2023/24 rate comparisons for water and sewer for the average customer.

Residential Water Rate Comparison

Rate Component	Current Rate	Proposed Rate	Change
Base Rate	\$15.10	\$17.30	\$2.20
Capital Improvements	\$15.10	\$15.10	\$0.00
Customer Admin Fee	\$4.23	\$4.44	\$0.21
Defensible Space	\$1.05	\$1.05	\$0.00
Total Monthly Base Water Bill	\$35.83	\$37.89	\$2.41
Water Use	\$1.95	\$2.15	\$0.20
1 st Tier	\$3.12	\$3.44	\$0.32
2 nd Tier	\$3.64	\$4.01	\$0.37

Residential Sewer Rate Comparison

Rate Component	Current Rate	Proposed Rate	Change
Base Rate	\$25.10	\$32.25	\$7.15

Capital Improvements	\$31.45	\$31.45	\$0.00
Customer Admin Fee	\$4.23	\$4.44	\$0.21
Total Monthly Base Sewer Bill	\$60.78	\$68.14	\$7.36
Sewer Use	\$4.00	\$4.75	\$0.75

HDR Engineering, Inc. presented a preliminary Fiscal Year 2023 IVGID Utility Rate Study at the meetings on February 8, 2023 and March 8, 2023. As proposed, the recommended utility rate increases for year one would increase Water Utility revenues by 10% and Sewer Utility revenues by 13.5%. The impact of these increases on the average residential customer are a one-year average Water utility rate increase of 8% and a one-year average Sewer utility rate increase of 13.2%. The percentage for the average utility rate increase is based upon an average customer using 10,000 gallons per month for water and 3,000 gallons per month for sewer.

At the March 8, 2023 meeting, the Board set the Public Hearing date for rate increases to be April 26, 2023 (Later amended to the current date of 6/14/2023). Also at the March 8 meeting, the Board directed Staff to prepare documents and updated Utility Rate Schedules, as proposed, with an overall Water Utility revenues increase of up to 10% and an overall Sewer Utility revenues increase of up to 13.5%.

Furthermore, at the Board meeting of March 8, 2023, the Board requested further information be brought forward prior to the Public Hearing date. The information requested was as follows:

1. A comparison of the results of the Fiscal Year 2022 Rate Study to the results of the current 2023 Rate Study.
2. Present the water use and revenue percentages for Irrigation Customers.
3. An update to the Water Utility rate analysis to include the return of funds from the Crystal Peak Waterline project to fund balance.

A request was also made for an additional Sewer Utility rate analysis to exclude the anticipated grant funding from the US Army Corp of Engineers 595 Program.

Staff presented the additionally requested information as a Report to the Board on April 12, 2023. The documents presented along with all the aforementioned HDR Engineering, Inc.'s presentations and the resulting Preliminary Draft Report Water and Sewer Rate Study can all be located online at:

<https://www.yourtahoeplace.com/events/notice-of-public-hearing-utility-rates>

At the May 10, 2023 meeting, the Board rescheduled the Public Hearing date to be June 14, 2023. This was a result of staff encountering an error in the

publishing of the Public Hearing newspaper ad and consequently the District was not complying with NRS 318.199. The resulting revised rate adoption schedule follows.

Schedule

The schedule for the proposed rate adoption is as follows:

Utility Rate Study Schedule	Date
Rate Study Presentation	February 8, 2023
Set Date of Public Hearing to Adopt New Utility Rates	March 8, 2023
Publish Notice of Public Hearing in Newspaper	March 17, 2023
Conduct Public Hearing and Adopt New Utility Rates – <i>Revised Date from original of 4/26/2023</i>	June 14, 2023
New Utility Rates Become Effective – Pending Approval – <i>Revised Date from original of 5/19/2023</i>	June 19, 2023

III. BID RESULTS

There are no bid results associated with this Memorandum.

IV. FINANCIAL IMPACT AND BUDGET

The water and sewer utility rates are recommended to increase to provide rate revenues of \$14.9 million (FY 2023/24) which is collected from the District’s water and sewer customer via monthly utility bills. The total Utility Fund (Fund 200) combined revenue requirement of approximately \$15.5 million (FY 2023/24) also includes non-operating and miscellaneous revenues of \$622 thousand.

The update to the District’s utility rate model is intended to evaluate the revenue required to support current and future operating and capital expenses, and contemplates increases over the next five years, pending Board direction and final approval of water and sewer rates at a future meeting.

V. ALTERNATIVES

No alternatives are presented.

VI. COMMENTS

The applicable Nevada Revised Statute for this Memorandum is NRS 318.199 Rates, tolls and charges for sewerage or water services or products: Schedules; public hearings; adoption of resolution; action to set aside resolution.

VII. BUSINESS IMPACT/BENEFIT

Increase Water and Sewer utility rates to support the District’s utility operating and capital expenses in order to continue providing adequate water and sewer

service to its customers.

This item is a “rule” within the meaning of Nevada Revised Statutes, Chapter 237, but it does not impose a direct and significant economic burden on a business or directly restrict the formation, operation or expansion of a business. Therefore, it does not require a Business Impact Statement.

VIII. ATTACHMENTS

1. Resolution No. 1903
2. 2023 Water Sewer Rate Study Draft Final Report
3. 2023 Water and Sewer Rate Study Results Presentation

IX. DECISION POINTS NEEDED FROM THE BOARD OF TRUSTEES

For the Board of Trustees to discuss and adopt Resolution No. 1903 for the proposed amendments to the Sewer and Water Schedule of Service Charges.

Resolution No. 1903

**A RESOLUTION ADOPTING SEWER – SCHEDULE OF SERVICE CHARGES,
WATER – SCHEDULE OF SERVICE CHARGES, AND FEE SCHEDULE
Incline Village General Improvement District**

WHEREAS, on the 14th day of June, 2023, a public hearing was held by the Board of Trustees of the Incline Village General Improvement District to consider the adoption of “Sewer – Schedule of Service Charges;” “Water – Schedule of Service Charges;” and “Fee Schedule”

WHEREAS, notice of said hearing was published as required by NRS 318.199; and

WHEREAS, testimony was presented as to the necessity for the adoption of the proposed amendments; and

WHEREAS, all interested parties were allowed at the public hearing and prior thereto, to present in writing or orally, information, views, and arguments; and

WHEREAS, the Board of Trustees, after considering all of the testimony, information, views and arguments, have determined that adoption of the proposed schedules is in the best interests of the District and is required.

NOW, THEREFORE, BE IT RESOLVED BY THE BOARD OF TRUSTEES OF THE INCLINE VILLAGE GENERAL IMPROVEMENT DISTRICT, that it hereby adopts , these three schedules effective immediately.

* * * * *

I hereby certify that the foregoing is a full, true and correct copy of a resolution duly passed and adopted at a regularly held meeting of the Board of Trustees of the Incline Village General Improvement District on the 14th day of June, 2023 by the following vote:

AYES, and in favor thereof,
NOES:
ABSENT:

Dave Noble
Secretary

SEWER - SCHEDULE OF SERVICE CHARGES

As Adopted on 6/14/2023, Resolution No. 1903

There are no recommended changes to Sewer Connection and Sewer Retroactive Capital Improvement Fees

Residential & 3/4" Service Rates (CAF = 1)	
Sewer Base x CAF x Users	\$32.25
Sewer Capital Improv x CAF x Users	\$31.45

FEE SCHEDULE

As Adopted on 6/14/2023, Resolution No. 1903

There are no recommended changes to the Fee Schedule

Fee Schedule	
Sewage Drop-off at Treatment Plant	\$85/per 1,000 gal
Backflow Inspections - up to 1 hr labor	\$75/per device
	Repairs at cost
Plan Check Fees	\$100/hour
Inspection Fees	\$100/hour
Upgraded Meter, Register or Transponder	Billed at cost
Service Calls - 1/2 hour minimum with equipment billed at cost	\$45/per half hour
Tampering with Equipment	\$100 minimum
	Repairs at cost
Water Waste Penalty	\$100
Hydrant Meter Rental Charges	\$1,150/deposit
	\$45/month
1" Meter Rental Charges	\$225/deposit
	\$20/month
3/4" Meter Rental Charges	\$110/deposit
	\$15/month
Bulk Water for Construction	\$2.02/per 1,000 gal
Violation of air-gap on truck fill-up	\$500
Returned Check Fee	\$25
Posting Service Charge	\$20
Mainline Tapping, if performed by IVGID	Cost plus 15%

Ski California, Tahoe resort win safety awards

Submitted to the Tribune

OLYMPIC VALLEY, Calif. — Ski California was selected as the 2023 Best Guest Safety Program award winner by the National Ski Areas Association at its National Convention this week for the creation and effective use of its digital Mountain Safety Guide.

Additionally, NSAA selected Palisades Tahoe, a Ski California member resort, for the Best Overall Safety Program for a large resort. This marks only the second time a state association has been honored with a prestigious NSAA

safety award. Ski California was first honored in 2018 for the print version of the Mountain Safety Guide.

"It is an honor to be recognized as this year's NSAA Best Guest Safety Program award winner. Together with our 35 member resorts, we created the digital version of our award-winning Mountain Safety Guide to make safety topics memorable, engaging, and consistent across all of our resorts," said Michael Reitzell, Ski California president. "Throughout the season, the guide has been a useful tool for our resorts, and

an effective way to educate skiers and riders about staying safe and making good decisions on the slopes. We're also pleased that Palisades Tahoe was recognized for its efforts with their award win."

In its first season, nearly all of Ski California's downhill resorts leveraged and promoted the guide through their channels at some point in the season, including integration into websites, blogs, resort apps, social media posts, employee orientations and safety meetings, online ticket and pass sales portals, promotion in high-traffic areas and more. At launch, site traffic exceeded the hosting limit of the server and an upgrade was required to accommodate site visitors. And because of online translation tools, the guide is viewable in languages other than English.

Designed to be relevant to skiers and riders of all experience and ability levels, the guide features the common set of safety guidelines used at member resorts in California and Nevada, including:

SKI CALIFORNIA MOUNTAIN SAFETY GUIDE

- What to know before you ski and ride
- Being safe on the slopes: staying in control, avoiding collisions, riding lifts, and more
- Snow safety, including deep snow and avalanche awareness
- NSAA's recently updated Your Responsibility Code
- Ski California member resorts' commitment to safety

Hwy 50 + Morgan Mill • 11.69 acres • \$2,000,000

Located in east Carson City, steps away from the Carson River and Empire Ranch neighborhood, perfect for an RV park or industrial space, the possibilities are endless.

NOTICE OF PUBLIC HEARING

IVGID is proposing a sewer and water rate increase, with an overall Water Utility revenues increase of up to 10% and an overall Sewer Utility revenues increase of up to 13.5%. The proposed increase for the average residential customer (10,000 gallons of water and 3,000 gallons of sewer per month) on water rates would be 8% and sewer rates would be 13.2%.

- The proposed rate increases are due to the following factors:
- Funding of the current and future operating and capital expenses
 - Funding of the annual debt service
 - The need to meet the reserve policy voted on by the Board of Trustees

Copies of the proposed documents are available at
893 Southwood Blvd.,
1220 Sweetwater Road,

And on our website at: www.yourtahoerplace.com/ivgid/resources/ivgid-ordinances

The public hearing will be held:
Wednesday, June 14, 2023 not earlier than 6:00 pm
and as soon thereafter as practicable
at **893 Southwood Blvd, Incline Village, Nevada**

Please check the posted Board of Trustees Notice of Meeting for any changes.

The 2023 Rate Study and Presentation, which were presented to the Board of Trustees on February 8, 2023 and on March 8, 2023, are available on our website: www.yourtahoerplace.com/public-works/rates-billing/about-rates-billing. The documents detail our rate structure and why the rate increase is being proposed.

If you have comments about the proposed changes to the Water or Sewer Rates, please contact us.

- You may:
- Write us a letter: 893 Southwood Boulevard
Incline Village, Nevada 89451
Attn: Utility Ordinance Amendments
 - Give us a call: (775) 832-1100
 - Send us a fax: (775) 832-1331

Completing the safety quiz at the end of the guide with at least 80% accuracy entered participants for a chance to win one of two 2023-24 unrestricted Ski California Gold Passes. This spring, due to continuous snowfall that extended the winter season for many Ski California member resorts, a robust new prize package was unveiled to encourage skiers and riders to continue to review the guide and take the quiz. Skiers and riders have until July 1 to review the Mountain Safety Guide, take the quiz and be entered for a chance to win the Ski California prize package that includes Praxis skis or a Jones snowboard, four 2023-24 lift tickets to the Ski California member resort of their choice, Ski California and resort swag, and more.

Ski California, in collaboration with its design partner, MMGY Origin, intends to make the Mountain Safety Guide available for customization by other industry associations. View Ski California Mountain Safety Guide and take the quiz at safety.skicalifornia.org.

DRAFT FINAL REPORT

**Incline Village General Improvement District
Water and Sewer Rate Study Update
June 2023**

June 1, 2023

Mr. Brad Underwood
Director of Public Works
893 Southwood Blvd
Incline Village, NV 89451

Subject: 2023 Water and Sewer Rate Study Update Draft Final Report

Dear Mr. Underwood:

HDR Engineering, Inc. (HDR) is pleased to present to Incline Village General Improvement District (District) the draft final report for the water and sewer rate study update (Study). The District's Study was developed to provide a long-term financial plan and proposed rates for each utility that will generate sufficient revenues to fund the operating and capital needs. The results of the Study provide cost-based water and sewer rates for the District's customers. This report outlines the overall approach used to achieve these objectives, along with the Study findings, conclusions, and recommendations.

More specifically, the Study was designed to update the prior comprehensive water and sewer rate study completed for the District in 2022. The 2022 study provided cost-based rates for the current fiscal year. This Study will update the revenues, expenses, and capital funding plan to develop a multi-year projection of water and sewer rates. The costs associated with providing utility services to the District's customers has been developed based on the information provided by the District and is included within the development of the proposed rates. The Study was developed utilizing generally accepted rate setting principles and methodologies and the District's specific system and customer characteristics. This report provides the basis for developing and implementing water and sewer rates which are cost-based and defensible to the District's customers.

We appreciate the assistance provided by the District's project team in the development of the Study. More importantly, HDR appreciates the opportunity to provide these technical and professional services to Incline Village General Improvement District.

Sincerely yours,
HDR Engineering, Inc.

Shawn Koorn

Introduction

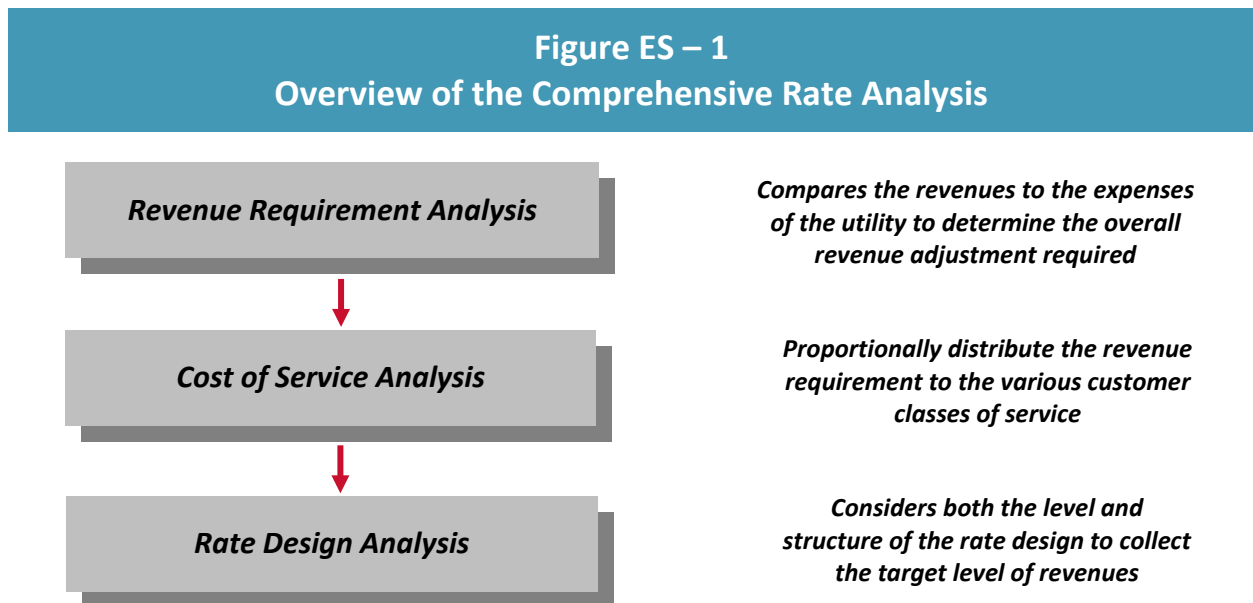

HDR Engineering Inc. (HDR) was retained by Incline Village General Improvement District (District) to conduct a comprehensive water and sewer rate study update (Study). The main objectives of the Study were to:

- Develop a projection of water and sewer revenues to support the operating and capital costs of each utility
- Provide a proportional distribution of the costs to provide water and sewer services to the District’s customers
- Propose cost-based water and sewer rates for a multi-year time period

The District owns, operates, and maintains the water and sewer systems. The costs associated with providing water and sewer services to the District’s customers has been developed based on the information provided by the District and is included within the development of the proposed rates. The Study was developed utilizing generally accepted rate setting principles and methodologies and the district’s specific costs and system and customer characteristics. This report provides the basis for implementing water and sewer rates which are cost-based and proportional to the District’s customers.

Overview of the Rate Study Process

A comprehensive rate study uses three interrelated analyses to address the adequacy and proportionality of each utility’s rates. These three analyses are a revenue requirement analysis, a cost of service analysis, and a rate design analysis. These three analyses are illustrated in Figure ES - 1.

Key Rate Study Results

The Study's technical analyses were developed based on the operating and maintenance (O&M) and capital costs necessary to provide water and sewer services to the District's customers. The analyses resulted in the following findings, conclusions, and recommendations.

- Revenue requirement analyses were developed for the time period of FY 2023 through FY 2033 for the water and sewer utilities on a stand-alone basis
 - ✓ The rate setting period was established for FY 2024 through FY 2028 for both utilities
- The District's FY 2023 adopted water and sewer budgets were used as the starting point of the analyses
- Operation and maintenance (O&M) expenses are projected to increase at inflationary levels
 - ✓ Central services allocation is included in FY 2024 for both utilities
 - ✓ Additional staff assumed in FY 2024 for the water and sewer utilities
- The proposed water and sewer rates for FY 2024 – FY 2028 were developed based on the results of the revenue requirement and cost of service analyses

Overview of the Study

As shown in Figure ES - 1, a rate study includes three analytical steps to establish cost-based and proportional rates. These are the revenue requirement, cost of service, and rate design analyses. Each of these analyses was completed for the water and sewer utilities on a stand-alone basis. For example, the operating and capital needs for the water utility are solely funded by water revenues, and likewise the sewer revenues fund sewer operating and capital needs. Provided in the following is a summary of the analyses completed for each utility.

Summary of Water Revenue Requirement Analysis

The revenue requirement analysis is the first analytical step in the District's water rate study. The water revenue requirement analysis determines the adequacy of the current water revenues to fund current and future costs related to both operations and maintenance (O&M) expenses and annual capital improvement needs. From this analysis, a determination can be made as to the overall level of water revenue adjustments needed to provide adequate and prudent funding for the utility.

For the water utility, the revenue requirement was developed based on the adopted budget for FY 2023 with a projected time period of FY 2024 through FY 2033. A multi-year time frame is recommended to identify major expenses that may be on the horizon. By anticipating future financial requirements, the District may begin planning for these changes sooner, thereby minimizing short-term rate impacts and overall long-term rates. For rate setting purposes, the focus of the Study was on the next five-year period of FY 2024 – FY 2028.

As with the 2022 study, the revenue requirement analysis is based on the cash basis approach. The cash basis approach is the most commonly used methodology by municipal utilities to set their revenue requirement. Under this approach the revenues of the utility must be sufficient to recover all cash needs including annual O&M expenses, debt service, rate funded capital, and

reserve funding. As noted, the primary financial inputs in the development of the revenue requirement were the District's FY 2023 budget documents, historical billed customer and consumption data, and the water utility capital improvement plan.

Budgeted O&M expenses were projected using inflationary factors for the District's various expenses to provide water supply, treatment, distribution, and transmission services over the projected time period starting with the adopted FY 2023 budget. In order to project O&M costs over the projected time period, inflationary factors were developed based on historical District increases in costs and estimated future inflationary impacts. Once the projection of O&M was completed the focus then shifts to the development of the capital funding plan. In addition to the adopted FY 2023 budget for the water utility, there were a number of assumed expenses. First was one additional staff in FY 2024 which was split between the water and sewer utilities. Also, the water utility had an increase in O&M costs related to the central service allocation as a new line item in the budget for FY 2024.

Capital funding continues to be a significant driver in the Study related to the annual level of rate funded (pay-as-you-go) capital to provide adequate funding for the water system infrastructure replacement. For the District's water utility, there is a component of the water rates which is directly related to funding capital improvement needs on an ongoing basis. Absent this internal funding source, the District would need to find outside funding (e.g., long-term borrowing) to fund annual capital needs as existing reserve levels are not sufficient to fund initial capital reinvestment in the short-term. The capital improvement plan summary is shown in Section 1 of the report which outlines the total annual capital project needs for the District and the identified funding sources.

The District has an established capital improvement charge based on the capital needs during the rate setting period. Over the rate setting period, the current level of the capital charge does not provide sufficient funding for the District's water capital infrastructure, both annual capital improvement needs and annual debt service issued to fund capital improvements. Over the projected time period, the capital improvement charge (i.e., level of rate funding) needs to be increased to adequately fund the capital improvements and long-term annual debt service payments.

The final components of the cash basis approach are annual debt service and reserve funding. The water utility currently has two outstanding debt issuances that have funded past capital improvements. In FY 2023, the total annual debt service is approximately \$307,000. This decreases to \$193,000 in FY 2028 – prior to any new issuances - as one of the debt issuances will be retired in FY 2027. As part of the District's capital funding plan, additional long-term borrowing has been identified and assumed in order to fund the District's water capital improvements. The assumed additional debt will start in FY 2024 and continues to increase reaching annual debt service payments, including existing debt service, of approximately \$451,000 by FY 2028.

Given the above discussion of the components of the District's water revenue requirement, a projection of operating and capital expenses can be developed to determine the overall level of

water rate revenues necessary to maintain the system. Provided below in Table ES - 1 is a summary of the revenue requirement analysis for the District’s water utility.

Table ES - 1						
Summary of the Water Revenue Requirement Analysis (\$000)						
	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028
Revenue						
Rate Revenues	\$5,900	\$5,904	\$5,907	\$5,911	\$5,914	\$5,918
Non-Operating Revenues	510	493	493	493	493	494
Total Revenue	\$6,410	\$6,397	\$6,400	\$6,404	\$6,407	\$6,412
Expenses						
Total O & M	\$5,103	\$5,208	\$5,538	\$5,757	\$5,898	\$6,155
Net Debt Service	0	0	0	0	0	0
Operating Fund Transfer	(317)	156	30	89	(246)	(98)
Capital Fund Transfer	1,624	1,625	1,627	1,628	1,630	1,632
Additional Capital Funding	0	0	350	640	1,065	900
Total Expenses	\$6,410	\$6,989	\$7,545	\$8,114	\$8,347	\$8,589
Bal. / (Def.) of Funds	\$0	(\$590)	(\$1,143)	(\$1,708)	(\$1,938)	(\$2,175)
Balance as a % of Rate Adj.	0.0%	10.0%	19.4%	28.9%	32.8%	36.7%
Proposed Rate Adjustment	0.0%	10.0%	8.5%	8.0%	3.0%	3.0%
Add'l Revenue with Rate Adj.	\$0	\$590	\$1,143	\$1,708	\$1,938	\$2,175
Bal. / (Def.) After Rate Adj.	0	0	0	0	0	0

As can be seen, the water revenue requirement has summed the O&M expense, net debt service, and reserve funding (transfers). As a point of reference, annual debt service payments are funded through the annual capital charge revenue and therefore the “Net Debt Service” is \$0. The total revenue requirement is then compared to the total revenues which include the rate revenues - at present rate levels - and other non-operating revenues. From this comparison, a balance or deficiency of funds in each year can be calculated. This balance or deficiency of funds is then compared to the current level of rate revenues to determine the level of rate revenue adjustment needed to meet the revenue requirement. Note that the “Bal. / (Def.) of Funds” row is cumulative. That is, any adjustments in the initial years will reduce the deficiency in the later years. Over the projected time period, the total deficiency of rate revenue ranges from \$590,000 in FY 2024 to approximately \$2.2 million by FY 2028.

Based on the District’s water revenue requirement analyses developed, HDR has concluded that the District will need to adjust the level of water rate revenues received over the next five years (FY 2024 – FY 2028). HDR has reached this conclusion for the following reasons:

- Adjustments are necessary to fund the ongoing O&M expenses as well as additional O&M expenses to provide water service
- Adjustments are necessary to fund the current, and future, annual debt service payments
- Adjustments are necessary to maintain prudent funding of capital

- The proposed adjustments maintain the District’s water utility’s financial health (e.g., reserve levels, debt service coverage ratios) and provide long-term, sustainable funding levels for the water utility

In reaching this conclusion, HDR recommends that the District adopt the proposed water rates as developed in the following sections for the water utility from FY 2024 through FY 2028. Based on the Study assumptions, this would provide sufficient funding for the O&M and capital improvement needs over the projected time period. A more detailed discussion of the development of the revenue requirement is provided in Section 1.1 of this report and the technical analysis is provided in Exhibit 1 through Exhibit 7 of the Water Technical Appendix.

Summary of the Water Cost of Service Analysis

A cost of service analysis determines the proportional distribution of the revenue requirement to the District’s water customer classes of service (i.e., rate schedules). The objective of the cost of service analysis is different from determining the revenue requirement. The revenue requirement analysis determines the utility’s overall revenue needs whereas the cost of service analysis determines the proportional manner to distribute the cost of providing service to each customer class of service and collect that level of revenue for the proposed time period. The cost of service analysis developed for the District is based on generally accepted methodologies as outlined in the American Water Works Association (AWWA) M1 Manual, Principles of Water Rates, Fees, and Charges. For the District’s Study, the water revenue requirement for FY 2024 was used as the test year in order to develop the cost of service analysis.

In summary form, the cost of service analysis began by functionalizing the revenue requirement. For the District’s water cost of service analysis, five customer classes of service were identified. This included residential, multi-family, commercial, irrigation, and snowmaking. As explained in more detail later in this report, the functionalized revenue requirement was equitably allocated to the various cost components. The individual allocation totals were then proportionally distributed to each customer class of service based upon the customer class’s use of, or demand placed, on each allocation component. The distributed expenses for each customer class were then aggregated to determine each customer class’s overall revenue responsibility. Table ES - 2 provides the summary of the cost of service analysis based on the water system specific costs and the characteristics of the District’s customer classes of service.

Table ES - 2
Summary of the Water Cost of Service Analysis (\$000) – Test Year FY 2024

Class of Service	Present Revenues	Distributed Costs	\$ Difference	% Difference
Residential	\$2,693	\$2,971	(\$278)	10.3%
Multi-Family	2,015	2,084	(69)	3.4%
Commercial	489	523	(33)	6.8%
Irrigation	604	787	(184)	30.4%
Snowmaking	<u>103</u>	<u>129</u>	<u>(25)</u>	24.7%
Total System	\$5,801	\$6,365	(\$565)	10.0%

A key element of the cost of service was developing a distribution approach to reflect the level of service for each customer classes of service. The cost of service analysis results in some differences between the customer classes of service. This is not uncommon given the nature of how customer water consumption patterns or costs associated with providing water service change over time. It is important to understand that a cost of service analysis is a snapshot in time the results will vary from year to year.

A detailed discussion of the development of the cost of service analysis is provided in Section 1.2 of this report and in Exhibit 8 through Exhibit 19 of the Water Technical Appendix.

Summary of the Water Rate Designs

The final step of the water rate study update process is the design of the District’s water rates to collect the targeted levels of revenue. The revenue requirement analysis first provided a set of recommendations related to the annual revenue adjustments and then the cost of service analysis provided a comparison of the proportionality between customer classes of service. Given the results of both analyses, the proposed rates incorporate the recommendations from each analysis.

The District’s current rate structure includes a monthly meter fee, capital improvement fee, admin fee, and defensible space fee that is the same for all customers. The meter and capital improvement charges vary based on the service meter size and the proportion by size is ratioed based on safe meter operating capacity. The administration fee and a defensible space fee (for fire fuel management) are both charged on a flat, fixed basis per account or living unit. The consumption charge structure for residential and commercial customers is a two-tiered increasing block structure. While the rate for each tier is the same, the residential customers have a fixed tier size whereas the multi-family customers tiers vary by the number of units and all other customer tiers vary by service meter size. The tier rate for irrigation customers was updated in the 2022 rate study and is separate from the residential and commercial rate with the tier sizes based on the customer meter size.

For the Study, the District and HDR determined that that the current structure would be maintained. Given this, the proposed rates were based on the results of the cost of service analysis. It is important to note that the capital improvement fee component of the rate structure is developed based on the level of annual capital over the rate setting period. The fixed meter fee and the water use charges were then adjusted proportionally to meet the proposed rate revenue. Provided in Table ES – 3 is a summary of the present and proposed water rates.

Table ES - 3 Summary of the Present and Proposed Water Rates						
	<i>Present Rates</i>	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028
Meter Fee						
3/4"	\$15.10	\$17.30	\$18.75	\$20.10	\$20.10	\$21.00
1"	25.22	28.89	31.31	33.57	33.57	35.07

Tier 3	3.73	4.94	5.41	5.87	5.87	6.06

Table ES – 3 shows that the current water rate structure has been maintained for all customers. The capital improvement fee was adjusted based on the specific annual capital expenses of the District’s water utility. The level of rates has been adjusted to reflect the overall revenue needs in each year.

The development of the proposed water rate designs is outlined in detail in Section 1.3 of the Study and in the Water Technical Appendix.

Summary of the Sewer Revenue Requirement Analysis

As with the District’s water utility, the revenue requirement analysis is the first analytical step in the sewer rate study process. The revenue requirement analysis determines the adequacy of the current sewer rates to fund current and future costs related to annual O&M and capital needs. From this analysis, a determination can be made as to the overall level of revenue adjustments needed to provide adequate and prudent funding for the sewer utility.

For the Study, the sewer revenue requirement was developed for the budgeted year FY 2023 with a projected time period of FY 2024 – FY 2033 which is the same time period that was used in the water analysis. As a practical matter, a multi-year time frame is recommended in an attempt to identify any major expenses that may be on the horizon. By anticipating future financial requirements, the District may begin planning for these changes sooner, thereby minimizing short-term rate impacts and overall long-term rates. As with the water rate study, the focus of the sewer analysis is on the next five-year period of FY 2024 through FY 2028.

For the sewer revenue requirement analysis, a cash basis approach was also utilized. As noted in the water analysis, the cash basis approach is the most commonly used methodology by municipal utilities to set their revenue requirement, and the method used in the 2022 rate study. The primary financial inputs in the development of the revenue requirement were the District’s FY 2023 sewer budget, customer characteristics, and capital improvement plan.

The budgeted sewer O&M expenses are projected using inflationary factors for the District’s various expenses to provide sewer services over the projected time period. These inflationary factors were based on historical District specific increases in costs and planned changes based on planning and financial analysis. A more detailed summary of the various inflationary assumptions is included in Exhibit 2 of the Sewer Technical Appendix which outlines the specific inflationary factors for the various O&M expense types included within the District’s adopted sewer budget. As a point of reference, the inflationary assumptions are the same for the water and sewer analyses. Just as in the water O&M expenses, sewer had additional staff assumed as well as the expense related to the central services allocation for the sewer utility.

A concerted effort was made, as with the water analysis, to continue to increase the level of rate funded capital (capital charge) to support the sewer capital improvement needs and maintain the sewer system (e.g., renewal and replacement needs) especially in light of the major sewer system capital projects related to the effluent pipeline over the next few years. A detailed

discussion of the capital funding plan is included in Section 2.1 of this report and in Exhibit 4 of the Sewer Technical Appendix.

At the current time, the sewer utility has two outstanding long-term issues with an annual total debt service of approximately \$336,000 in FY 2023. Over the review period, the two existing issuances are retired by FY 2027. However, with the addition of new long-term debt to fund the effluent pipeline project which starts in FY 2023, the annual debt service payments increase in total to approximately \$2.8 million by FY 2028.

Just as with the water utility, the sewer utility may need to transfer funds to reserves to fund future capital improvements or meet prudent target ending fund reserve balances. Alternatively, reserve funds may be used to offset annual shortfalls, as necessary. This is accomplished through the “Reserve Funding” component of the revenue requirement.

Given a projection of O&M and capital expenses, a summary of the sewer revenue requirement analysis was developed. Provided in Table ES - 4 is a summary of the revenue requirement analysis for the District’s sewer utility.

Table ES - 4						
Summary of the Sewer Revenue Requirement Analysis (\$000)						
	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028
Revenues						
Rate Revenues	\$7,412	\$7,420	\$7,427	\$7,434	\$7,442	\$7,449
Other Revenues	<u>1,123</u>	<u>129</u>	<u>120</u>	<u>120</u>	<u>125</u>	<u>132</u>
Total Revenues	\$8,535	\$7,549	\$7,547	\$7,554	\$7,567	\$7,581
Expenses						
Total O & M	\$5,505	\$5,849	\$6,109	\$6,389	\$6,518	\$6,844
Additional Capital Funding	0	0	0	0	0	0
Net Debt Service	0	0	0	0	0	0
Operating Fund Transfer	(193)	(525)	(114)	158	331	317
Capital Fund Transfer	<u>3,223</u>	<u>3,226</u>	<u>3,229</u>	<u>3,233</u>	<u>3,236</u>	<u>3,239</u>
Total Expenses	\$8,535	\$8,551	\$9,224	\$9,780	\$10,085	\$10,400
Bal./(Def.) of Funds	\$0	(\$1,002)	(\$1,677)	(\$2,225)	(\$2,518)	(\$2,819)
Bal as a % of Rate Adj	0.0%	13.5%	22.6%	29.9%	33.8%	37.8%
Proposed Rate Adjustment	0.0%	13.5%	8.0%	6.0%	3.0%	3.0%
Add'l Revenue with Rate Adj	\$0	\$1,002	\$1,677	\$2,225	\$2,518	\$2,819
Bal / (Def) After Rate Adj	\$0	\$0	(\$0)	\$0	\$0	\$0

As can be seen, the revenue requirement has summed the O&M expense, rate funded capital, net debt service, and reserve funding (transfers) for the District’s sewer utility. As noted with the water analysis, annual debt service is funded through annual capital charge revenues, therefore the Net Debt Service is \$0. The total revenue requirement is then compared to the total sources of funds which include the rate revenues - at present rate levels - and other miscellaneous

revenues. From this comparison, a balance or deficiency of funds in each year can be determined. As a note, the “Bal. / (Def.) of Funds” row is cumulative. That is, any adjustments in the initial years will reduce the deficiency in the later years.

Based on the revenue requirement analysis developed herein, HDR has concluded that the District will need to adjust the level of sewer revenues over the next five years (FY 2024 – FY 2028). HDR has reached this conclusion for the following reasons:

- Adjustments are necessary to fund the ongoing O&M expenses as well as additional O&M expenses to provide sewer service
- Adjustments are necessary to maintain prudent funding of annual renewal and replacement of the sewer utility
- The proposed adjustments maintain the District’s strong financial health (e.g., debt service coverage ratios, reserves) and provide long-term, sustainable funding levels for the District

In reaching this conclusion, HDR recommends that the District adopt the proposed rates as developed in the following sections for FY 2024 through FY 2028 to provide sufficient funding for the O&M and capital improvement needs identified in the Study. A detailed discussion of the development of the sewer revenue requirement is provided in Section 2.1 of this report.

Summary of the Sewer Cost of Service Analysis

A cost of service analysis determines the proportional distribution of the revenue requirement to the various sewer customer classes of service (i.e., rate schedules). The objective of the cost of service analysis is to determine the proportional manner in which to distribute cost of providing sewer service and collect that revenue over the proposed time period. The sewer cost of service analysis is based on generally accepted methodologies as outlined in the Water Environment Federation (WEF) Manual of Practice No. 27, Financing and Charges for Wastewater Systems. For the sewer analysis, the sewer revenue requirement for FY 2024 was used as the test year in order to develop the cost of service analysis.

In summary form, the cost of service analysis began by functionalizing the revenue requirement. For the District’s sewer cost of service analysis, three customer classes of service were identified. This included residential, multi-family, and commercial. As explained in more detail later in this report, the functionalized revenue requirement was then allocated to the various cost components. The individual allocation totals were then proportionally distributed to the various customer class of service based upon each customer class’s use of or demand placed on each system. The distributed expenses for each customer class were then aggregated to determine each customer class’s overall revenue responsibility. Table ES - 5 provides the summary of the cost of service analysis based on the sewer system specific costs and the District’s customer characteristics.

Table ES - 5
Summary of the Sewer Cost of Service Analysis (\$000)

Class of Service	Present Revenues	Distributed Costs	\$ Difference	% Difference
Residential	\$3,197	\$3,541	(\$344)	10.8%
Multi-Family	3,299	3,844	(545)	16.5%
Commercial	<u>923</u>	<u>1,036</u>	<u>(113)</u>	12.2%
Total System	\$7,420	\$8,421	(\$1,002)	13.5%

The cost of service reflects the level of service provided to each customer class. The cost of service analysis resulted in minor differences in costs between the customer classes of service. As noted, a cost of service analysis is a snapshot in time the results will vary from year to year.

A detailed discussion of the development of the cost of service analysis is provided in Section 2.2 of this report and in Exhibit 7 through Exhibit 15 of the Sewer Technical Appendix.

Summary of the Sewer Rate Designs

The third and final step of the rate study process is the design of the sewer rates to collect the targeted levels of revenue. The revenue requirement analysis provided a set of recommendations related to annual revenue adjustments and the cost of service analysis provided a review of the proportionality between customers. As noted, the cost of service results showed minor cost differences. Given this, it was determined that sewer rates would be adjusted equally for all customers to reflect the results of the cost of service analysis. In discussion with District staff, it was determined that the current rate structure was contemporary and met the District’s goals and objectives. Given these two recommendations, the proposed rates maintain the current rate structure, and were adjusted to reflect the cost of service results.

The District currently has the same rate structure for the residential, multi-family, and commercial customers. This includes a monthly base charge and capital charge which are charged per account for residential, by unit for multi-family, and by meter size for commercial. There is also a flat admin fee for all customers. Lastly, there is a sewer use fee which is a uniform rate for all customers with a separate rate for commercial customers. For residential customers, both single family and multi-family, the sewer bill is based on winter water consumption, while commercial customers bills are based on all metered water consumption.

Given the result of the prior analyses, the revenue requirement and cost of service, the proposed sewer rates can be developed. One proposed transition is the unique rate for commercial sewer use. Provided in Table ES – 6 is a summary of the present and proposed rates for the District’s sewer utility.

Table ES - 6
Summary of the Present and Proposed Sewer Rates

	<i>Present Rates</i>	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028
Base Charge						
3/4", Res, Multi Fam	\$25.10	\$32.25	\$36.50	\$40.00	\$42.25	\$44.25
1"	41.92	53.86	60.96	66.80	70.56	73.90
1 1/2"	83.58	107.39	121.55	133.20	140.69	147.35

8"	1,677.23	1,677.23	1,677.23	1,677.23	1,677.23	1,677.23
10"	2,410.64	2,411.27	2,411.27	2,411.27	2,411.27	2,411.27
Admin Fee	\$4.23	\$4.44	\$4.66	\$4.90	\$5.14	\$5.40
Sewer Use						
Residential	\$4.00	\$4.75	\$5.37	\$5.88	\$6.00	\$6.22
Multi-Family	4.00	4.75	5.37	5.88	6.00	6.22
Commercial	4.70	5.60	6.35	6.95	7.10	7.37

Table ES – 6 shows that the current rate structure has been maintained for all customers. The level of rates has been adjusted to meet the revenue target calculated in the revenue requirement analysis and the results of the cost of service analyses. These proposed rates provide the proportionality between the various customers. The development of the sewer rate design is outlined in more detail in Section 2.3 of the Study.

Reserve Levels

As mentioned, the District maintains reserves for the water and sewer utilities. This includes an operating reserve, capital reserve, effluent pipeline reserve (sewer only), and debt reserve. Each of these reserves has a target minimum balance. The operating reserve target minimum balance is based on 25% of annual O&M expenses. The capital reserve minimum target is annual

depreciation expense. Provided below is a summary of the combined water and sewer operating and capital reserve projected ending reserve balances.

As noted, in addition to the operating and capital reserves, the District maintains a debt reserve fund. This fund maintains a minimum balance of one year of annual water and sewer debt service payments. This level is maintained during the course of this study.

Summary of the Water and Sewer Rate Study

The Study focused on the adequacy and proportionality of the District’s water and sewer rates. Based on the analyses developed herein, which included the District’s specific operating and capital expenses, HDR has proposed a comprehensive set of recommendations for each utility. The following sections of the report provide a more detailed discussion of the technical analyses undertaken, along with the findings, conclusions, and recommendations of the Study.

1 Development of the Water Study Update

This section of the report will describe the development of the water rate study update. This includes the development of the revenue requirement, cost of service, and rate design analyses. Each of these analyses was completed for the water system based on the specific customer and system characteristics. The following discussion will outline the summary of each of these analyses to support the development of cost-based and proportional water rates.

1.1 Water Revenue Requirement

This following discussion describes the development of the revenue requirement for the District's water utility. The District has provided detailed revenue and expenses data for the water system that provides the basis for the development of the revenue requirement. The revenue requirement analysis is the first analytical step in the comprehensive water rate study process. This analysis determines the adequacy of the District's overall water revenues, at current rate levels. From this analysis, a determination can be made as to the overall level of revenue (rate) adjustment needed to provide adequate and prudent funding for both operating and capital needs. HDR developed an independent analysis based on information provided by the District as part of the review of proposed rate adjustments.

1.1.1 Determining the Water Revenue Requirement

In developing the District's water revenue requirement, the water utility - as an enterprise fund - must financially "stand on its own" and be properly funded. That is, no transfers from other District funds occur to support the water utility. As a result, the revenue requirement analysis, as developed herein, assumes the full and proper funding needed to operate and maintain the water system on a financially sound and prudent basis. A major goal of the Study was to maintain prudent funding for each utility as a separate enterprise fund.

1.1.2 Establishing a Time Frame and Approach

The first step in calculating the revenue requirement for the District's water utility was to establish a time frame for the analysis. For the Study, the revenue requirement was developed for a 10-year time period (FY 2023 through FY 2033). Reviewing a multi-year time period is recommended as it attempts to identify any major expenses that may be on the horizon. By anticipating future financial requirements, the District can begin planning for these changes sooner, thereby minimizing short-term rate impacts and overall long-term rates. For purposes of establishing water rates, the Study focuses on the next five years as the rate setting period of FY 2024 through FY 2028.

The second step in determining the revenue requirement was to decide on the basis of accumulating costs. In this case, for the revenue requirement analysis a cash basis approach was utilized. The cash basis approach is the most common methodology used by municipal utilities to set their revenue requirement and the approach used in the 2022 rate study. Table 1 - 1 provides a summary of the cash basis approach and cost components used to develop the District's water revenue requirement.

Table 1 – 1 Overview of the Water Cash Basis Revenue Requirement

+	Operation and Maintenance Expenses
+	Taxes and Transfers
+	Rate Funded Capital
+	Debt Service (Principal + Interest) – Existing and Future
±	<u>Reserve Funding</u>
=	Total Revenue Requirement
-	<u>Miscellaneous Revenues</u>
=	Net Revenue Requirement (Balance Required from water Rates)

Given a time period around which to develop the revenue requirement and a method to accumulate the costs, the focus shifts to the development and projection of the revenues and expenses of the District’s Study.

The primary financial inputs in the development of the revenue requirement are the District’s adopted budget for the water utility, historical billed customer and consumption data, and the water capital improvement plan. Presented below is a detailed discussion of the steps and key assumptions contained in the development of the projections of the District’s water revenue requirement analysis.

1.1.3 Projecting Rate and Other Miscellaneous Revenues

The starting point of the revenue requirement is to develop a projection of the water rate revenues, at present rate levels. In general, this process involved developing projected billing units for each customer group. For the water utility, the billing units are the number of accounts, and meters, for the fixed billing charge and the billed usage (metered consumption) for the consumption charge. The billing units were then multiplied by the current adopted water rates. This method of independently calculating revenues links the projected revenues used within the analysis to the projected billing units. It also helps to confirm that the billing units used within the study are reasonable for purposes of projecting future revenues, distributing costs, and ultimately, establishing proposed rates.

In total, and at current rate levels, the District is projected to receive approximately \$5.9 million in rate revenue in FY 2023. Over time, the study has assumed a conservative level of customer growth, based on historical growth levels, of 0.1% per year. This results in rate revenues being essentially flat over the projected time period.

In addition to rate revenues, the District receives miscellaneous revenues as a result of operating the water system. These are revenues related to interest earnings, fees, rental income, and other miscellaneous revenues. In total, the District is projected to receive approximately \$500,000 annually during the rate setting period.

On a combined basis, incorporating the rate revenues and the miscellaneous revenues, the District’s water utility has total projected revenues of approximately \$6.4 million in FY 2023 which remains flat through FY 2028 at \$6.4 million. Again, this does not include any proposed revenue adjustments, only increases in rate revenues is due to customer growth and annual changes in miscellaneous revenues.

1.1.4 Projecting Operation and Maintenance Expenses

Operation and maintenance (O&M) expenses are incurred by the District to provide water service (supply, treatment, distribution, etc.) as well as to operate and maintain the existing infrastructure. The District provided detailed O&M expenses based on the FY 2023 adopted budget. The budgeted O&M expenses were projected over the time period based on historical inflationary factors experienced by the District and the general economy. In addition, new staff was assumed in FY 2024 which is split with the sewer utility and is approximately \$55,000 in FY 2024 and is escalated, thereafter. Also, the central services allocation to the water utility is assumed to start in FY 2024 at \$288,000 and is then escalated in the following years. Provided in Table 1 - 2 is a summary of the primary escalation factors used to develop the projection of O&M expenses for the water utilities.

Table 1 – 2 Summary of the O&M Escalation Factors					
	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028
Labor	5.0%	5.0%	5.0%	5.0%	5.0%
Benefits - Medical	10.0%	10.0%	10.0%	10.0%	10.0%
Benefits - Other	6.0%	6.0%	6.0%	6.0%	6.0%
Professional / Special Srvc.	5.0%	5.0%	5.0%	5.0%	5.0%
Materials & Supplies	3.0%	3.0%	3.0%	3.0%	3.0%
Equipment	4.0%	4.0%	4.0%	4.0%	4.0%
Miscellaneous	3.0%	3.0%	3.0%	3.0%	3.0%
Utilities	4.0%	4.0%	4.0%	4.0%	4.0%
Insurance	3.0%	3.0%	3.0%	3.0%	3.0%

Each of the budgeted O&M expenses were reviewed and the applicable escalation factor applied to develop the O&M for the projected time period. Exhibit 2 of the Water Technical Appendix provides a summary of the assumptions used to develop the projection of revenues and escalation of the O&M expenses.

Based on the FY 2023 adopted budget, the total O&M expenses for the District’s water utility are \$5.1 million. Over the planning horizon, total O&M expenses for the District are projected to increase to approximately \$6.2 million by FY 2028 based on the corresponding escalation factors

and assumed additional O&M expenses. The projection of O&M expenses reflects an average inflationary increase of 3.8% per year over the projected time period through FY 2028. This is driven in part by the cyclical nature of the repairs and maintenance budget line item.

1.1.5 Capital Funding Plan

A key component in the development of the District’s water revenue requirement was properly and adequately funding capital improvement needs. One of the major issues facing utilities across the U.S. is the amount of deferred capital projects and the funding pressure from growth or expansion-related improvements. The proper and adequate funding of capital projects is an important issue for all water utilities and is not just a local issue or concern of the District.

In general, there are three types of capital projects that a utility may need to fund. These include the following types:

- Renewal & replacement projects
- Growth / capacity expansion projects
- Regulatory-related projects

A capital project that is defined as a renewal and replacement project is a project required for maintaining the existing system that is in place today. As the existing plant or pipelines become worn out, obsolete, etc., the utility should be making continuous investments to maintain the integrity of the facilities. In contrast to this, a utility may make capital investments to expand the capacity of facilities to accommodate future capacity needs (customers). Finally, certain projects may be a function of a regulatory requirement in which the Federal or State government mandates the need for an improvement to the system to meet a regulatory standard. Understanding these different types of capital projects is important because it may help to explain why costs are increasing and the cost drivers for any needed revenue adjustments. In addition, and more importantly, the way in which projects are funded may vary by the type of capital project. For example, renewal and replacement projects should be paid for via rates and funded on a “pay-as-you-go basis.” In contrast to this, growth or capacity expansion projects may be funded via the collection of impact fees (i.e., growth-related charges) in which new development pays an equitable share of the cost of facilities necessary to serve their development (impact). Finally, regulatory projects may be funded by a variety of different means, which may include rates, long-term debt, grants, etc.

While the above discussion appears to neatly divide capital projects into three clearly defined categories, the reality of working with specific capital projects may be more complex. For example, a pump may be replaced, but while being replaced, it is up sized to accommodate greater capacity to serve increasing demands or new development. There are many projects that share these “joint” characteristics.

For purposes of developing the capital funding plan the District provided its capital improvement plan (CIP) which has been summarized in Table 1 - 3 along with the expected funding sources developed as part of the rate study.

Table 1 – 3
Summary of the Water Capital Funding Analysis (\$000)

	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028
Total Capital Projects	\$2,237	\$2,843	\$1,942	\$3,619	\$2,311	\$1,481
<i>Less: Other Funding</i>						
Operating Fund	\$0	\$0	\$0	\$0	\$0	\$0
Capital Fund	2,032	1,273	1,592	979	1,246	581
Grant Funding	205	0	0	0	0	0
Long-Term Borrowing	<u>0</u>	<u>1,570</u>	<u>0</u>	<u>2,000</u>	<u>0</u>	<u>0</u>
Total Other Funding Source	\$2,237	\$2,843	\$1,592	\$2,979	\$1,246	\$581
Total Rate Funded Capital	\$0	\$0	\$350	\$640	\$1,065	\$900

The capital improvements are primarily related to renewal and replacement of aging water system infrastructure as well as annual equipment purchases. While the total amount required to fund projects may vary from year-to-year, the rate study capital funding plan has developed a plan to provide a consistent funding source for capital improvements. As a point of reference, the District’s annual depreciation expense for the water utility was \$1.8 million for FY 2022. A desirable and recommended minimum funding target for rate funded capital is an amount equal to or greater than annual depreciation expense. This is critical as the replacement cost of an asset may be many times the original costs reflected through annual depreciation expense. As a point of reference, the District’s current water capital charge totals approximately \$1.6 million. Given this, the additional rate funded capital reflects the increase in the annual renewal and replacement funding needs. In developing this financial plan, HDR and the District have attempted to minimize rate impacts while funding the necessary capital improvement projects.

1.1.6 Projection of Debt Service

The District currently has two (2) outstanding long-term debt issues for the water utility. On a combined basis, the total annual debt service for FY 2023 is approximately \$307,000. Over the review period, one of the of issuances is retired in FY 2027 which results in a reduction of \$114,000 per year. However, as noted in Table 1 – 3 it is assumed that the District’s water utility will need to issue (new) long-term debt over the rate setting period and the total annual debt service is anticipated to be approximately \$451,000 per year by FY 2028. For rate setting purposes the debt service is funded through the annual capital charge revenues.

As part of the Study, HDR is not providing municipal advice as it relates to bonds, terms, or structures of debt issuance. Rather, the Study is simply identifying funding needs and estimating the annual debt service payments for rate setting purposes.

1.1.7 Reserve Funding

The final component of the revenue requirement analysis is the transfer to, or from, reserves to either maintain prudent ending fund balances or for future funding of specific capital improvements. In future years, as rates are adjusted and reach sufficient levels, the District is

able to transfer funds to the operating reserves to replenish prior expenditures and to meet minimum target levels. For the District’s study the annual capital charge revenue is transferred to the capital reserve to fund annual debt service and capital improvements.

1.1.8 Summary of the Revenue Requirement

Given the above projections of revenues and expenses, a summary of the District’s water revenue requirement analysis can be developed. In developing the revenue requirement analysis, consideration was given to the financial planning considerations of the District. In particular, emphasis was placed on minimizing rates, while providing adequate funds to support the operational activities and necessary capital improvement needs over the review period. Presented below in Table 1 - 4 is a summary of the District’s water revenue requirement based on projected expenses and current rates. Detailed exhibits of this analysis can be found in the Water Technical Appendix in Exhibit 3.

Table 1 - 4						
Summary of the Water Revenue Requirement Analysis (\$'000)						
	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028
Revenues						
Rate Revenues	\$5,900	\$5,904	\$5,907	\$5,911	\$5,914	\$5,918
Other Revenues	510	495	495	495	495	496
Total Revenues	\$6,410	\$6,398	\$6,402	\$6,406	\$6,409	\$6,414
Expenses						
Total O & M	\$5,103	\$5,208	\$5,538	\$5,757	\$5,898	\$6,155
Net Debt Service	0	0	0	0	0	0
Operating Transfer	(317)	156	30	89	(246)	(98)
Capital Transfer	1,624	1,625	1,627	1,628	1,630	1,632
Additional Capital Funding	0	0	350	640	1,065	900
Total Expenses	\$6,410	\$6,989	\$7,545	\$8,114	\$8,347	\$8,589
Bal./ (Def.) of Funds	\$0	(\$590)	(\$1,143)	(\$1,708)	(\$1,938)	(\$2,175)
Balance as a % of Rate Adj.	0.0%	10.0%	19.4%	28.9%	32.8%	36.7%
Proposed Rate Adjustments	0.0%	10.0%	8.5%	8.0%	3.0%	3.0%
Add'l Revenue with Rate Adj.	\$0	\$590	\$1,143	\$1,708	\$1,938	\$2,175
Bal. / (Def.) After Rate Adj	0	0	0	0	0	0

The water revenue requirement has summed the O&M, net debt service, and reserve funding (transfers) for the five-year rate setting period. The total revenue requirement is then compared to the total revenues which are the rate revenues, at present rate levels, and other miscellaneous revenues. From this comparison, a balance or deficiency of funds in each year can be determined. This balance or deficiency of funds is then compared to the rate revenues to determine the level of rate revenue adjustment needed to meet the revenue requirement. The “Bal. / (Def.) of Funds” row is cumulative. That is to say, any adjustments in the initial years will reduce the deficiency in the later years.

As shown, the overall level of revenues needs to be increased over the test period to meet the operating and capital needs of the water utility. Based on the analysis, the District will need to adjust rate revenue levels in FY 2024 by 10.0%, 8.5% in FY 2025, 8.0% in FY 2026, and 3.0% annually in FY 2027 and FY 2028. Based on the rate transition plan provided in Table 1 – 4, the proposed annual revenue adjustments (blue shaded line) have been developed to meet the operating and capital needs of the District in each year of the analysis.

1.1.9 Reserve Fund Levels

Another key element of determining the financial health and sustainability of the District’s water utility is to review the level of available reserve levels after the proposed rate revenue adjustments. In general, utilities can have several different reserves each with a different purpose. The typical types of reserves utilities maintain are generally referenced as an operating reserve and a capital reserve. Each of these funds can have a minimum ending balance that, if reached or falls below, is a signal that the District should review the revenue sources associated with each fund. The minimum ending balances will vary depending on the purpose of the fund and the expected revenue sources.

The District’s water utility rate study included the review of three primary reserves.

Operating Reserve– This reserve is in place to meet the District’s cash flow needs as well as funding during emergencies. The typical minimum ending balance for an operating reserve ranges from 90 – 365 days of annual O&M expenses. The target minimum for the District for rate setting purposes was set at 25% (or 90 days) of annual O&M expenses and is approximately \$1.3 million. This target is used in order to maintain a sufficient amount of funds to cover expenses should any unexpected interruption of rate revenues occur.

Capital Reserve – This reserve similar to the operating reserve but the capital expenses rather than operating expenses. A capital reserve minimum balance is generally set on a level that targets average annual capital needs or annual depreciation expense. For capital, the fund acts to store funds for use towards future capital projects. In this way, the District can minimize the impact to rates on an annual basis and maintain a more leveled projection of rates over time. Again, these funds are in place to help support the capital needs of the system. For the Study, a target minimum was set at annual depreciation which for FY 2023 for water is \$1.8 million.

Debt Reserve – This reserve, as the name implies, is relating to storing funds for debt service. The idea being that the funds would be available to pay the annual debt service payment should and unforeseen circumstance with regards to revenue generation or collection interruption. For the water rate study, there is currently no identified minimum for this reserve. This level of reserves will need to be reviewed as the District issues additional long-term debt and the debt issuance may require a reserve fund.

1.1.10 Revenue Requirement Summary

Based on the revenue requirement analyses developed herein, HDR has concluded that the District will need to adjust the level of water revenues received over the next five years (FY 2024 – FY 2028). HDR has reached this conclusion for the following reasons:

- Rate adjustments are necessary to fund the water utility O&M costs

- Rate adjustments are necessary to maintain prudent funding of annual renewal and replacement of the water system and specific capital improvements identified over this time period
- The proposed adjustments will provide the District with a financially healthy water utility (e.g., reserve levels, debt service coverage ratios) and provide long-term, sustainable funding levels

In reaching this conclusion, HDR recommends that the District adopt the proposed annual revenue adjustments for FY 2024 through FY 2028. This is in order to provide sufficient funding for the O&M and capital improvement needs for the Study time period.

1.2 Water Cost of Service

In the previous section, the revenue requirement analysis focused on the total sources and application of funds required to adequately fund the District’s water utility. This section will provide an overview of the cost of service analysis developed for the District.

A cost of service analysis determines the proportional distribution of the total revenue requirement between the various customer classes of service (Residential, Multi-Family, Commercial, Irrigation, and Snowmaking). The previously developed revenue requirement for FY 2024 was utilized in the development of the cost of service analysis.

1.2.1 Objectives of a Cost of Service Study

There are two primary objectives in conducting a cost of service analysis:

1. Proportionally distribute the District’s revenue requirement among the customer classes of service; and,
2. Derive average unit costs (i.e., cost-based rates) for subsequent rate designs

The objectives of the cost of service analysis are different from determining a revenue requirement. As noted in the previous section, a revenue requirement analysis determines the utility’s overall financial needs, while the cost of service analysis determines the proportional and equitable manner to collect the revenue requirement from each of the customer classes of service.

The results of the cost of service analysis determine the unit costs which are used in the development of the final proposed rate designs. The water cost of service analysis provides a per unit cost of water consumption based on each customer class’s proportional share of costs. For example, a water utility incurs costs related to average day, peak day, fire protection, and customer-related cost components. A water utility must build sufficient capacity¹ to meet

¹ System capacity is the system’s ability to supply water to all delivery points at the time when demanded. Coincident peaking factors are calculated for each customer class at the time of greatest system demand. The time of greatest demand is known as peak demand. Both the operating costs and capital assets related costs incurred to

summer peak capacity needs. Therefore, those customers contributing to those peak demands on the system should pay their proportionately higher share of the costs to provide the capacity in the system. The unit costs provide the relationship between these components which are then used to set proportional and cost-based rates.

1.2.2 Determining the Customer Classes of Service

The first step in a cost of service analysis is to determine the customer classes of service. Based on discussion with District staff, the classes of service used within the cost of service analysis were:

- Residential
- Multi-Family
- Commercial
- Irrigation
- Snow Making

In determining classes of service for cost of service purposes, the objective is to group customers together into similar or homogeneous groups based upon similar facility requirements and/or demand characteristics. Based on the District’s desire to evaluate and develop cost of service based rates, the customer classes of service were developed for evaluating the current rates for each customer class of service. This is a key aspect of the cost of service analysis that allows for the proportional distribution of costs to establish the proposed rates for each customer class of service. Based on these customer classes of service, each with their own unique customer consumption patterns, characteristics, and facility requirements the cost of service can be developed.

1.2.3 General Cost of Service Procedures

In order to evaluate the proportionality of the current rate structure for each customer class of service on the District’s water system, a cost of service analysis is conducted. A cost of service analysis utilizes a three-step approach to review costs. These steps take the form of functionalization, allocation, and distribution. Provided below is a detailed discussion of the water cost of service study conducted for the District, and the specific steps taken within the analysis. The approach used for the District’s Study conforms to generally accepted cost of service methodologies as outlined in the AWWA M1 manual.

1.2.3.1 Functionalization of Costs

The first analytical step in the cost of service process is called functionalization. Functionalization is the arrangement of O&M expense and asset data by major operating functions (e.g., supply, transmission, storage, distribution). Within this Study, there was a limited amount of

accommodate the peak demands are generally allocated to each customer class based upon the class’s contribution to the peak month, day, or hour event.

functionalization of the cost data as it was largely accomplished within the District’s system of accounts.

1.2.3.2 Allocation of Costs

The second analytical task performed in a water cost of service study is the allocation of the costs. The allocation of costs examines why the expenses were incurred or what type of need is being met. The following allocation components were used to develop the water cost of service analysis. As a point of reference, these are the same allocation components as develop for the 2022 rate study.

- **Commodity Related Costs:** Commodity costs are those costs which tend to vary with the total quantity of water consumed by a customer. Commodity costs are those incurred under average load (demand) conditions and are generally specified for a period of time such as a month or year. Chemicals is an example of commodity-related cost as these costs tend to vary based upon the total demand of water.
- **Capacity Related Costs:** Capacity costs are those which vary with peak demand, or the maximum rates of flow to customers. System capacity is required when there are large demands for water placed upon the system (e.g., summer lawn watering). For water utilities, capacity related costs are generally related to the sizing of facilities needed to meet a customer’s maximum water demand at any point in time. For example, portions of distribution storage reservoirs and mains (pipes) must be adequately sized to meet the peak demands of the system and for each customer class of service.
- **Customer Related Costs:** Customer costs are those costs which vary with the number of customers on the water system. They do not vary with system output or consumption levels. These costs are also sometimes referred to as readiness to serve or availability costs. Customer costs may also sometimes be further allocated as either actual or weighted. Actual customer costs vary proportionally, from customer to customer, with the addition or deletion of a customer regardless of the size of the

Water Cost of Service Analysis Terminology

Functionalization – The arrangement of the cost data by functional category (source of supply, distribution, treatment, etc.).

Allocation – The assignment of functionalized costs to cost components (e.g., commodity, capacity, customer, and fire protection related).

Distribution – Distributing the allocation costs to each class of service based upon each class’s proportional contribution to that specific cost component.

Commodity Costs – Costs that are allocated as commodity related vary with the total demand of water (e.g., chemical use at a treatment plant).

Capacity Costs – Costs allocated as capacity related vary with peak day or peak hour usage. Facilities are often designed and sized around meeting peak demands.

Fire Protection Costs – Costs that are related to fire protection services (e.g., hydrants, oversizing of storage and distribution mains).

Customer Costs – Costs allocated as customer related vary with the number of customers on the system (e.g., metering costs).

customer. An example of an actual customer cost is postage for mailing bills. This cost does not vary from customer to customer, regardless of the size or consumption characteristics of the customer. In contrast, a weighted customer cost reflects a disproportionate cost, from customer to customer, with the addition or deletion of a customer. Examples of weighted customer costs are items such as meter maintenance expenses, where a large commercial customer requires a significantly more expensive meter than a typical residential customer.

- **Public Fire Protection Related Costs:** Fire protection costs are O&M and capital costs necessary to allow for public fire protection functions. Usually, such costs relate to public fire hydrants and the over-sizing of mains and distribution storage reservoirs for fire protection purposes.
- **Revenue Related Costs:** Some costs associated with the utility may vary with the amount of revenue received by the utility. An example of a revenue related cost would be a utility tax which is based on the gross utility revenue.
- **Direct Assignment:** Some costs associated with the utility may be directly assigned to a specific customer class, or classes. This can be a specific O&M expense or component of the infrastructure that only benefits a specific customer class, or classes.

1.2.4 Development of Distribution Factors

Once the allocation process is complete, and the customer groups have been defined, the allocated costs are distributed to each customer group. The District's allocated costs were proportionally distributed to the previously identified customer classes of service using the following distribution factors. Similar to the allocation approach, these are the same distribution factors as used to develop the 2022 rate study.

- **Commodity Distribution Factor:** As noted, commodity-related costs vary with the total water consumption. Therefore, the commodity distribution factor was based on the projected total metered consumption plus losses for each class of service based on recent customer metered consumption data and projected for the FY 2024 cost of service test period.
- **Capacity Distribution Factor:** The capacity distribution factor was developed based on the estimated contribution to peak day use of each class. Peak day use by customer class of service was calculated by developing peaking factors for each customer group. For the District's Study, the peaking factor was defined as the relationship between peak day contribution and average day use and determined for each customer group based on a review of the average month to peak month usage for each class of service. Given an estimated peaking factor, the peak day contribution for each class of service was developed.
- **Customer Distribution Factor:** Customer costs vary with the number of customers on the system. Two basic types of customer distribution factors were identified – actual and weighted. The distribution factor for actual customers were based on the projection of the number of customers developed within the revenue requirement. The weighted customer distribution factor is for meters and services. This factor is calculated on the number of equivalent meters for each customer class. This reflects the difference in costs associated with providing service to larger sized meters.

- **Public Fire Protection Distribution Factor:** The development of the distribution factor for public fire protection expenses involved an analysis of each class of service and their respective fire flow requirements. The analysis considered the gallon per minute fire flow requirements in the event of a fire, along with the duration of the required flow. The fire flow rates used within the distribution factor were based on industry standards estimates for each customer class of service. The minimum fire flow requirements are then multiplied by the number of customers in each class of service, and the assumed duration of the fire, to determine the class’s prorated fire flow requirements.
- **Revenue Related Distribution Factor:** The revenue related distribution factor was developed from the projected rate revenues for FY 2024 for each customer class of service. These same revenues were used within the revenue requirement analysis discussed previously.

Details related to the distribution of costs is found in Exhibits 8 through 12 of the Water Technical Appendix. The distribution actors were based on the customer characteristics of the District’s customers. That is the characteristics (average day, peak day, customer number) of the previously discussed customer classes of residential, commercial, irrigation, and snow making.

1.2.5 Functionalization and Allocation of Plant in Service

As noted, the first step of the cost of service analysis is the functionalization and allocation of plant in service. In performing the functionalization of plant in service, HDR utilized the District’s historical plant (asset) records. Once the plant assets were functionalized, the analysis shifted to the allocation of the asset. The allocation process included reviewing each group of assets and determining which costs the assets were related to. The assets were allocated to the previously described allocation components of commodity-related, capacity-related, customer-related, revenue-related, public fire protection-related, or a direct assignment. The approach used for the Study is based on the methodology as described in the AWWA M1 Manual and the District’s specific water system operating and customer characteristics. The functionalization and allocation of the plant in service followed the same approach as outlined in the 2022 rate study. Therefore, the relationships have been maintained between cost allocations and only the costs have been updated.

Table 1 – 5 provides a summary of the basic functionalization and allocation of the major water plant items.

Table 1 - 5
Summary of the Allocation of Water Plant in Service

Category	Commodity Related	Capacity Related	Customer Related	Fire Protection	Revenue Related	Direct Assign.
Land	100.0%	0.0%	0.0%	0.0%	0.0%	0.0%
Source of Supply	50.8%	49.2%	0.0%	0.0%	0.0%	0.0%
Pump Station	50.8%	49.2%	0.0%	0.0%	0.0%	0.0%
Storage	0.0%	92.0%	0.0%	8.0%	0.0%	0.0%
Water T&D	0.8%	48.2%	46.9%	4.1%	0.0%	0.0%
Water Treatment	50.8%	49.2%	0.0%	0.0%	0.0%	0.0%
Net Plant in Service	32.3%	39.9%	25.4%	2.4%	0.0%	0.0%

A more detailed exhibit of the functionalization and allocation of water plant (assets) can be found in the Water Technical Appendix in Exhibit 13.

1.2.6 Functionalization and Allocation of Operating Expenses

As noted in the AWWA M1 Manual, operating expenses are generally functionalized and allocated in a manner similar to the corresponding plant account. For example, maintenance of distribution mains is typically allocated in the same manner (allocation percentages) as the plant account for distribution mains. This approach to allocating the District’s operating expenses was used for this analysis. Although in general, the District does separate O&M expenses by function (e.g., supply, distribution), not all of the O&M is functionalized which is not uncommon for utilities. As a result, the approach to allocate the operating expenses was based on the allocation of the plant, or asset data, which reflects the investment made by the District to provide service.

For the Study, the revenue requirement for FY 2024 was functionalized and allocated based on the approach noted above. Which was based on the approach established in the 2022 rate study. The District utilized a cash basis revenue requirement, which was comprised of operation and maintenance expenses, rate funded capital, debt service, and reserve funding. Provided in Table 1 – 6 is a summary of the allocation of the water revenue requirement to the cost centers. The allocation of revenue requirement is further detailed in Exhibit 15 of the Water Technical Appendix.

Table 1 - 6
Summary of the Allocation of the Revenue Requirement (\$000)

	Commodity	Capacity	Actual Customer	Wt. Cust. Actg.	Wt. Cust Mtrs & Srvcs	Fire Protection	Revenue Related
Net Revenue Requirement	\$1,739	\$1,862	\$17	\$0	\$2,718	\$158	\$0

1.2.7 Major Assumptions of the Cost of Service Study

A number of key assumptions were used within the District’s water cost of service study. Below is a brief discussion of the major assumptions used.

- A test period of FY 2024 was used for the cost of service analysis in order to select the expenses which should be allocated and distributed for the rate setting period. The revenue and expense data used was previously developed within the revenue requirement analysis.
- A cash basis approach was utilized which conforms to generally accepted water cost of service approaches and methodologies and was the basis for the 2022 rate study
- The allocation of plant in service was developed based upon generally accepted cost allocation techniques. Furthermore, they were developed using the District’s specific system and customer characteristics and data
- Consumption by cost or class of service used within this study were developed for each class of service from historical usage information provided by the District
- Peak day capacity distribution factors were calculated based upon each customer group’s average to peak month relationship

1.2.8 Summary Results of the Cost of Service Analysis

In summary form, the cost of service analysis began by functionalizing the water revenue requirement developed for FY 2024. The functionalized revenue requirement was then allocated to the appropriate cost component(s). The individual allocation totals were then distributed to the identified customer classes of service and tiers based on the appropriate distribution factor. For example, commodity related costs were distributed based on the commodity distribution factor which was based on annual water consumption. Each customer class, and/or tier, is distributed their proportional share of commodity costs based on total annual water consumption. Similarly, capacity costs were distributed proportionally based on the capacity distribution factor. This factor reflects the peaking characteristics of each customer class, and tier. In this way, each class, and tier, is distributed the proportional share of costs allocated to the capacity component.

The distributed expenses for each customer class were then aggregated to determine each customer class’s overall revenue responsibility. Shown below in Table 1 – 7 is a summary of the distributed costs to each customer class of service, also described in Exhibit 18 to the Water Technical Appendix.

Table 1 – 7
Summary of the Distribution of the Water Revenue Requirement (\$000)

Component	Residential	Multi-Family	Commercial	Irrigation	Snowmaking	Total
Commodity	\$827	\$415	\$154	\$274	\$68	\$1,739
Capacity	954	368	116	388	37	1,862
Actual Customer	14	1	1	0	0	17
Cust. Acctg.	0	0	0	0	0	0
Meters & Services	1,112	1,230	227	125	23	2,718
Fire Protection	64	70	24	0	0	158
Revenue Related	0	0	0	0	0	0
Direct Assign.	0	0	0	0	0	0
Total	\$2,971	\$2,084	\$523	\$787	\$129	\$6,494

The District’s water cost of service study distributes the FY 2024 revenue requirement to each customer class with their respective benefit received from and burdens placed on the water system (proportional distribution). A cost of service analysis is based on one year’s O&M expense data and projected customer usage information. Given this, the results of the cost of service analysis may change from year to year. As the District continues to monitor rates and cost of service results through future studies, future cost of service adjustments may be necessary to reflect costs and customer consumption patterns at that time.

Based on the proportional distribution of the costs, a comparison is made to the current revenues to determine the overall revenue adjustment by class of service to meet the overall system revenue needs. Provided in Table 1 - 8 is a summary of the cost of service analysis.

Table 1 - 8
Summary of the Water Cost of Service Analysis (\$000)

Class of Service	Present Revenues	Distributed Costs	\$ Difference	% Difference
Residential	\$2,693	\$2,971	(\$278)	10.3%
Multi-Family	2,015	2,084	(69)	3.4%
Commercial	489	523	(33)	6.8%
Irrigation	604	787	(184)	30.4%
Snowmaking	103	129	(25)	24.7%
Total System	\$5,801	\$6,365	(\$565)	10.0%

As can be seen in Table 1 - 8, while an overall revenue adjustment of 10.0% is necessary, the distribution of costs results in different revenue adjustments by class of service. It is important to note that the result of the cost of service analysis are a snapshot in time and may change from year to year depending on the system and customer characteristics. Given this, the results of the

cost of service analysis are reviewed from a range of reasonableness perspective. Based on this, the class of service that is outside of the range of reasonableness is the irrigation and snow making customer classes.

1.2.9 Consultant’s Conclusions and Recommendations

The results of the cost of service show differences in the cost to serve each customer class, specifically the irrigation and snow making customer classes of service. The 2022 study established a separate consumption charge for the irrigation and snow making customers to begin to implement the cost of service results from the 2022 study. As shown in the cost of service results for this study, the irrigation and snow making rate should continue to be adjusted to reflect the cost of service results. The balance of costs are applied equally to the remaining customer classes of service. The next section – 1.3 or the water rate design – it is discussed how the rate structure is adjusted to reflect the results of the cost of service. It is recommended that the District continue to complete cost of service analyses periodically and review the results to see if additional trends are apparent.

1.2.10 Summary of the Cost of Service Analysis

This section of the report has provided the recommendations resulting from the cost of service analysis developed for the District’s water utility. This analysis was prepared using generally accepted cost of service techniques as provided in the AWWA M1 Manual. The following section of the report will provide a summary of the present and proposed rates for the District’s water utility.

1.3 Water Rate Design

The final step of the District’s water analysis as part of the Study is the design of water rates to collect the desired levels of revenues, based on the results of the revenue requirement analysis as well as incorporating recommended adjustments from the cost of service analysis. In reviewing District’s rates, consideration must be given to the level of the rates as well as the structure of the rates. The level of rates reflects the amount of revenues that should be collected while the structure of the rates is how it is collected (charged) from the customers.

The overall revenue level for the District’s water utility has been established in the revenue requirement analysis while the proportional distribution of costs between the customer classes has been developed in the cost of service analysis which provides the revenue levels to be collected from each class of service.

1.3.1 Rate Design Criteria and Considerations

Prudent rate administration dictates that several criteria must be considered when setting utility rates. Some of these rate design criteria are listed below:

- Rates which are easy to understand from the customer’s perspective
- Rates which are easy for the District to administer
- Consideration of the customer’s ability to pay
- Continuity, over time, of the rate making philosophy

- Policy considerations (encourage efficient use, economic development, etc.)
- Provide revenue stability from month to month and year to year
- Promote efficient allocation of the resource
- Equitable and non-discriminatory (cost-based)

It is important that the District provide its water customers with a proper price signal as to what their consumption and peaking (demand) requirements are costing. This goal may be approached through rate level and rate structure. When developing the proposed rate designs, all the above listed criteria can be taken into consideration. However, it is difficult, if not impossible, to design a rate that meets all the goals and objectives listed above. For example, it may be difficult to design a rate that takes into consideration the customer's ability to pay, and one which is cost-based. In designing rates, there are always trade-offs between the various goals and objectives.

1.3.2 Present Water Rates

The current water rate structure includes a fixed base charge which is flat for residential and multi-family then for all other customers it is based on the service meter size and adjusted by the CAF factor or the meter equivalency factor. Customers are also charged a capital improvement charge that is assessed in the same manner as the fixed base charge. There is also a three tier volumetric consumption charge for the first 20,000 gallons, 20,000 to 60,000 gallons, and over 60,000 gallons. These tiers are adjusted based the CAF factor corresponding to the service meter size for non-residential customers. In this way, the tier sizes for larger customers reflect the demands and use of water by customers and the capacity provided through the fixed meter charge. The rate by tier is the same for residential and commercial customers while the irrigation customers have a unique rate based on the cost of service results.

1.3.3 Summary of the Proposed Water Rates

Developing cost-based water rates is of paramount importance in developing proposed water rates. HDR developed the District's proposed rates based on the methodologies provided in the AWWA M1 Manual.

The next step is to develop the proposed rates for the next five-year period. The capital charge is calculated based on the capital improvement projections as developed in the revenue requirement for the rate setting period, both direct capital funding and annual debt service payments. Then the fixed and variable charges were adjusted to target the overall rate revenue adjustment. Provided below is a summary of the present and proposed rates for each customer class of service for each year of the rate setting period. Provided below in Table 1 – 9 is a summary of the current and proposed rates for the District's customers.

Table 1 - 9
Summary of the Present and Proposed Water Rates

	<i>Present Rates</i>	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028
Meter Fee						
3/4"	\$15.10	\$17.30	\$18.75	\$20.10	\$20.10	\$21.00
1"	25.22	28.89	31.31	33.57	33.57	35.07
1 1/2"	50.28	57.61	62.44	66.93	66.93	69.93
2"	80.48	92.21	99.94	107.13	107.13	111.93
3"	151.00	173.00	187.50	201.00	201.00	210.00
4"	251.72	288.39	312.56	335.07	335.07	350.07
6"	503.28	576.61	624.94	669.93	669.93	699.93
8"	805.28	922.61	999.94	1,071.93	1,071.93	1,119.93
10"	1,157.72	1,326.39	1,437.56	1,541.07	1,541.07	1,610.07
Capital Improv. Fee						
3/4"	\$15.10	\$15.10	\$18.23	\$20.92	\$24.85	\$23.35
1"	25.22	25.22	30.44	34.93	41.50	38.99
1 1/2"	50.28	50.28	60.70	69.66	82.76	77.74
2"	80.48	80.48	97.16	111.50	132.47	124.44
3"	151.00	151.00	182.29	209.19	248.53	233.46
4"	251.72	251.72	303.88	348.72	414.30	389.19
6"	503.28	503.28	607.59	697.22	828.35	778.14
8"	805.28	805.28	972.18	1,115.60	1,325.41	1,245.07
10"	1,157.42	1,157.72	1,397.65	1,603.84	1,905.48	1,789.97
Admin Fee	\$4.23	\$4.44	\$4.66	\$4.90	\$5.14	\$5.40
Defensible Space	1.05	1.05	1.05	1.05	1.05	1.05
Water Use (Res & Com)						
Tier 1	\$1.95	\$2.15	\$2.15	\$2.22	\$2.22	\$2.29
Tier 2	3.12	3.44	3.44	3.55	3.55	3.66
Tier 3	3.64	4.01	4.01	4.14	4.14	4.27
Water Use (Irrigation)						
Tier 1	\$2.00	\$2.65	\$2.90	\$3.15	\$3.15	\$3.25
Tier 2	3.20	4.24	4.64	5.04	5.04	5.20
Tier 3	3.73	4.94	5.41	5.87	5.87	6.06

As noted, the capital charge is based on the capital funding needs in each year, both direct capital and annual debt service payments. The admin fee was adjusted annual based on the annual increase in costs for those expense accounts as developed in the revenue requirement. The meter charge and consumption charge were then increased to meet the overall revenue target for each year.

It is important to note that the monthly bill impacts will vary between customer classes and also customers in the same class depending on the meter size and amount of consumption. The proposed rates meet the overall revenue adjustments necessary to fund operating and capital costs as developed in the Study, as well as a continuing the transition of the implementation of the cost of service results for the irrigation customers.

1.3.4 Water Rate Study Update Recommendations

Based on the results of the water rate study, HDR recommends the following:

- Revenue adjustments are necessary to prudently fund operating and capital renewal and replacement expenses
 - Revenues should be adjusted 10.0% in FY 2024, 8.5% in FY 2025, 8.0% in FY 2026, and 3.0% annually in FY 2027 and FY 2028
- Recommend implementing cost of service adjustments, specifically to address the irrigation cost of service results
- Prior to the end of the financial planning projected period, the District should complete a review of the water revenue levels and costs at that time

1.4 Summary of the Water Rate Study Update

This completes the analysis for the Incline Village General Improvement District's water utility. This study has provided a comprehensive review and development of proposed water rates for the District. Adoption of the proposed water rates will allow the District to meet its current and projected financial obligations for the time period reviewed based on the assumed customer growth, capital plan, and inflationary increases in operating costs. Should these assumptions change, the proposed rate adjustments may also need to be revised to reflect the current conditions.

2 Development of the Sewer Study Update

This section of the report will describe the development of the sewer rate study. This includes the development of the revenue requirement, cost of service, and rate design analyses. Each of these analyses was completed for the sewer utility based on the specific sewer customer and sewer system characteristics. The following discussion will outline the summary of each of these analyses to support the development of cost-based and proportional sewer rates.

2.1 Revenue Requirement

This section describes the development of the revenue requirement analysis for the District's sewer utility. The revenue requirement analysis is the first analytical step in the comprehensive sewer rate study process. From this analysis, a determination can be made as to the overall level of sewer rate adjustments needed to provide adequate and prudent funding for both operating and capital needs of the utility. The primary objective of a rate study is to develop cost-based rates over the rate setting period.

2.1.1 Determining the Revenue Requirement

In developing the District's sewer revenue requirement, the utility must financially "stand on its own" and be properly funded. As a result, the revenue requirement analysis, as developed herein, assumes the full and proper funding needed to operate and maintain the District sewer system on a financially sound and prudent basis. The following sections will provide a more detailed discussion of the development of the sewer revenue requirement analysis for the District.

2.1.2 Establishing a Time Frame and Approach

The first step in calculating the revenue requirement for the District's sewer system was to establish a time frame for the revenue requirement analysis. A 10-year period (FY 2024 – FY 2033) was determined to be an appropriate amount of time for the revenue requirement and matches the approach taken for the water utility. This time period was composed of the District's FY 2023 budget which was then projected based on assumed escalation factors. Reviewing a multi-year time period is recommended since it attempts to identify any major expenses that may be on the horizon. By anticipating future financial requirements, the District can begin planning for these changes sooner, thereby minimizing short-term rate impacts and overall long-term rates.

The second step in determining the sewer revenue requirement was to decide on the basis of accumulating costs. In this particular case, for the revenue requirement analysis a "cash basis" approach was utilized just as for the District's the water utility. The cash basis approach is the most commonly used methodology by municipal utilities to set their revenue requirement and is also the methodology that was used in the development of the District's 2022 rate study.

Given a time period around which to develop the revenue requirement and a method to accumulate the costs, the focus then shifts to the development and projection of the revenues and expenses of the District's sewer utility. The primary financial inputs in the development of

the revenue requirement were the District’s adopted budget documents, recent billed customer data, and the District’s capital improvement plan. Presented below is a detailed discussion of the steps and key assumptions contained in the development of the projections of the District’s sewer revenue requirement analysis.

2.1.3 Projecting Rate and Other Miscellaneous Revenues

The first step in developing a projection of the sewer rate revenues, at present rate levels, was to determine the projected billing units (meter size, metered consumption/winter water consumption). The billing units were based on the most recent 12-month period to determine the current customer billing characteristics. These billing units were then multiplied by the corresponding present sewer rates. This method of independently calculating revenues links the projected revenues used within the analysis to the projected billing units. It also helps to confirm that the billing units used within the Study are reasonable for purposes of projecting future revenues, customer characteristics or units for the cost of service analysis and provide the units for establishing the proposed rates to collect the target level of revenues. The rate revenues are also shown in Exhibit 3 under “Rate Revenues” for FY 2023.

In total, and at adopted rate levels, the District’s sewer utility is projected to receive approximately \$7.4 million in rate revenue in FY 2023. Based on current District planning documents, the Study has assumed a conservative assumption for customer growth of 0.1% per year. By FY 2028, the rate revenues - assuming no rate adjustments - are projected to be approximately \$7.4 million, that is, essentially flat. The detailed calculation of the revenues at present rates is included in Exhibit 3 of the Sewer Technical Appendix.

In addition to rate revenues, the District also receives other non-operating revenues. These are revenues related to interest income, fees, other misc. revenue, etc. In total, the sewer utility is projected to receive approximately \$1.1 million in FY 2023 of which a significant proportion (\$1.0 million) is a one-time transfer to the sewer utility. Non-operating revenues were estimated to decrease after the one-time transfer and be approximately \$132,000 by FY 2028.

On a combined basis, considering the rate revenues and the miscellaneous revenues, the District’s sewer utility has total projected revenues of approximately \$8.5 million in FY 2023. This amount is anticipated to decrease due to the one-time transfer to approximately \$7.6 million through FY 2028. The assumptions used for projecting growth and increases in miscellaneous revenues can be found in Exhibit 2 of the Sewer Technical Appendix. The projection of rate and miscellaneous revenues can be found in Exhibit 3.

2.1.4 Projecting Operation and Maintenance Expenses

Operation and maintenance (O&M) expenses are incurred by the District to maintain the sewer system collection, pumping, and treatment at a consistent, high level, of service. The starting point of the projection of O&M expenses was the District’s adopted FY 2023 budget. From there, additional expenses have been assumed such as the additional staff in FY 2024 that is split with the water utility and totals \$55,000 in FY 2024. Additionally, the central services allocation is assumed to be \$270,000 in FY 2024. Budgeted O&M and assumed additional expenses were projected over the Study time period based on historical inflationary factors. These factors took into consideration the District’s historical cost increases and projected increases and are summarized below in Table 2 - 1.

Table 2 – 1 Summary of the Sewer O&M Escalation Factors					
	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028
Labor	5.0%	5.0%	5.0%	5.0%	5.0%
Benefits - Medical	10.0%	10.0%	10.0%	10.0%	10.0%
Benefits - Other	6.0%	6.0%	6.0%	6.0%	6.0%
Professional Svcs.	5.0%	5.0%	5.0%	5.0%	5.0%
Materials & Supplies	3.0%	3.0%	3.0%	3.0%	3.0%
Equipment	4.0%	4.0%	4.0%	4.0%	4.0%
Chemicals	5.0%	5.0%	5.0%	5.0%	5.0%
Utilities	4.0%	4.0%	4.0%	4.0%	4.0%
Insurance	3.0%	3.0%	3.0%	3.0%	3.0%
Power	4.0%	4.0%	4.0%	4.0%	4.0%
Miscellaneous	2.5%	2.5%	2.5%	2.5%	2.5%

In total, O&M expenses were projected to increase at an annual inflation rate of approximately 4.5% over the Study time period. The escalation factors used are shown in Exhibit 2 of the Sewer Technical Appendix. In addition to the budgeted O&M expenses, there was also additional O&M expenses regarding staffing needs starting in FY 2024.

The total operation and maintenance expenses for the sewer utility are budgeted to be approximately \$5.5 million in FY 2023. Over the five-year projected rate setting period, the total O&M expenses are projected to increase to approximately \$6.8 million by FY 2028.

2.1.5 Projecting Capital Funding Needs

A key component in the development of the sewer revenue requirement was to adequately fund capital improvement needs in the short- and long-term. One of the major issues facing many utilities across the U.S. is the amount of deferred capital projects and the funding pressure from regulatory-related improvements. The proper and adequate funding of capital projects is an important issue for all utilities and not just a local issue or concern of the District. To accomplish this, the District has a Capital Improvement Plan (CIP) to address both the short- and long-term needs of the sewer utility. The District’s CIP will help guide and prioritize capital projects over

time and capital investments to expand the capacity of facilities to accommodate future customers.

In general, there are three types of capital projects that the District may need to fund. These include the following types:

- Renewal and replacement projects
- Growth/capacity expansion projects
- Regulatory-related projects

Each of these types was explained in detail in Section 1.1.5 and are the same for sewer as outlined in the water rate study discussion. The way in which projects are funded may vary by the type of capital project. For example, renewal and replacement projects should be funded through annual rates on a “pay-as-you-go basis”. In contrast to this, growth or capacity expansion projects may be funded through the collection of capacity charges (i.e., growth-related charges) in which new development pays a proportional and equitable share of the cost of improvements required as a result of their connection (impact) and that benefit development. Finally, regulatory projects may be funded by a variety of different means, which may include one or more sources such as rates, long-term debt, grants, etc.

While the above discussion appears to neatly divide capital projects into three clearly defined categories, the reality of working with specific capital projects may be more complex. For example, a mainline may be replaced, but while being replaced, it is up sized to accommodate the need for greater capacity. There are many projects that share these “joint” characteristics. At the same time, projects may not be “replacement” related, but rather “improvement” related. Provided below in Table 2 - 2 is a summary of the sewer utility capital funding analysis, based on the District’s capital improvement plan.

Table 2 – 2						
Summary of the Sewer Capital Funding Plan (\$000)						
	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028
Total Capital Improvement Projects	\$18,688	\$19,592	\$16,773	\$18,771	\$1,657	\$863
<i>Less: Other Funding</i>						
Operating Fund	\$0	\$0	\$0	\$0	\$0	\$0
Capital Fund	2,497	0	0	0	1,657	863
Effluent Reserve Fund	7,979	721	523	2,521	0	0
USDA Grant	3,052	2,191	0	0	0	0
Federal Earmark	0	1,600	0	0	0	0
Long-term Borrowing	<u>5,160</u>	<u>15,080</u>	<u>16,250</u>	<u>16,250</u>	<u>0</u>	<u>0</u>
Total Other Funding	\$18,688	\$19,592	\$16,773	\$18,771	\$1,657	\$863
Rate Funded Capital	\$0	\$0	\$0	\$0	\$0	\$0

While the total amount of capital improvements will vary from year to year, the sewer capital funding plan has attempted to provide a consistent, annual funding source for the replacement of deteriorating system assets. In this case, the sewer rate structure includes a capital charge that provides funding for annual capital improvement needs. In addition to this, to fund the capital plan, the District has planned on long-term debt to fund the effluent pipeline project.

As a point of reference, the District's annual depreciation expense for FY 2022 is approximately \$1.9 million. Similar to the target for the water utility, a desirable funding target for rate funded CIP is an amount equal to or greater than annual depreciation expense in order to approximately keep up with the rate of deterioration of the system assets. This level of funding appears appropriate based on the level of annual depreciation expense. At current levels, the District's annual capital funding is far exceeding the annual depreciation expense which means they are adequately funding renewal and replacement of the existing sewer infrastructure.

As noted in the water capital funding section, annual depreciation expense is not the same as replacement cost. Thus, funding an amount which exceeds the depreciation expense is both prudent and appropriate. As noted, to help establish a prudent level of annual replacement funding through rates, HDR worked with District staff to develop a funding plan for the CIP. In developing this financial plan, HDR and the District have attempted to minimize rate impacts while funding the necessary capital projects of the sewer utility.

2.1.6 Projection of Debt Service

The District currently has two outstanding long-term debt issues for the sewer utility with a total annual payment (P+I) of approximately \$336,000 in FY 2023. Over the rate setting period, both of the existing issuances are fully paid for. As noted in the capital funding analysis, the District has assumed that additional long-term debt will be necessary to fund sewer utility capital improvements, primarily the effluent pipeline project, over the five-year review period. This results in a total long-term debt service of approximately \$2.8 million in FY 2028.

HDR is not advising the District on the terms of any bond issuances, only identifying the overall funding needs. HDR is not acting in a municipal advisor role to the District for the issuance of any long-term borrowing.

2.1.7 Reserve Funding

The final component of the revenue requirement analysis is reserve funding. This can be described as transfers of revenue to reserve funds to maintain prudent ending fund balances or for future funding of specific or unanticipated projects. For the District, funds from the capital charge component of the rates are transferred into the capital fund in order to pay for annual capital improvement projects and annual debt service. In addition, once rates are set at a sufficient level, annual revenues are transferred to meet the operating fund minimum target balances.

2.1.8 Summary of the Sewer Revenue Requirement

Given the above projections of revenues and expenses, a summary of the sewer revenue requirement analysis can be developed. In developing the revenue requirement analysis,

consideration was given to the financial planning considerations of the District. In particular, emphasis was placed on attempting to minimize rates, yet still have adequate funds to support the operational activities and capital projects throughout the projected time period. Presented in Table 2 - 3 is a summary of the projected sewer revenue requirement. Detailed exhibits of this analysis can be found in the Sewer Technical Appendix (Exhibits 1 – 6).

Table 2 - 3 Summary of the Sewer Revenue Requirement Analysis (\$000)						
	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028
Revenues						
Rate Revenues	\$7,412	\$7,420	\$7,427	\$7,434	\$7,442	\$7,449
Other Revenues	<u>1,123</u>	<u>129</u>	<u>120</u>	<u>120</u>	<u>125</u>	<u>132</u>
Total Revenues	\$8,535	\$7,549	\$7,547	\$7,554	\$7,567	\$7,581
Expenses						
Total O & M	\$5,505	\$5,849	\$6,109	\$6,389	\$6,518	\$6,844
Additional Capital Funding	0	0	0	0	0	0
Net Debt Service	0	0	0	0	0	0
Operating Fund Transfers	(193)	(525)	(114)	158	331	317
Capital Fund Transfers	<u>3,223</u>	<u>3,226</u>	<u>3,229</u>	<u>3,233</u>	<u>3,236</u>	<u>3,239</u>
Total Expenses	\$8,535	\$8,551	\$9,224	\$9,780	\$10,085	\$10,400
Bal./ (Deficiency) of Funds	\$0	(\$1,002)	(\$1,677)	(\$2,225)	(\$2,518)	(\$2,819)
Balance as % of Rev from Rates	0.0%	13.5%	22.6%	29.9%	33.8%	37.8%
Proposed Rate Adjustments	0.0%	13.5%	8.0%	6.0%	3.0%	3.0%
Add'l Revenue with Rate Adj.	\$0	\$1,002	\$1,677	\$2,225	\$2,518	\$2,819
Bal. / (Def.) After Rate Adj.	\$0	\$0	(\$0)	\$0	\$0	\$0

As can be seen, the revenue requirement has summed the O&M, rate funded capital, net debt service, and reserve funding components. Similar to the water utility analysis, the annual debt service is funded through the existing capital charge component of the sewer rates. The total revenue requirement is then compared to the total revenues which include both rate revenues – at current rate levels – and other revenues. From this comparison, a balance or deficiency of funds in each year can be determined. This balance or deficiency of funds is then compared to the projected revenues from current rates to determine the level of rate adjustment needed to meet the revenue requirement. The “Bal. / (Def.) of Funds” row is cumulative. That is, any adjustments in the initial years will reduce the deficiency in the later years. Over the rate setting period, the total deficiency in revenues ranges from approximately \$1.0 million in FY 2024 to \$2.8 million in FY 2028.

The revenue requirement in Table 2 - 3 has been developed to meet financial planning objectives of the District. More specifically, the District desires to adequately and prudently fund the sewer operating and capital needs. Table 2 - 3 has also included a set of proposed rate revenue adjustments (blue highlighted band) which are sufficient to meet the total revenue requirements over the projected time period. The proposed revenue adjustments are a function of assumed inflation over this time period, coupled with the need to increase the capital improvement

funding from rates (renewal and replacement funding), meet minimum reserve levels, fund annual debt service payments, and meet legally required debt service coverage ratios.

The overall revenue adjustments may not reflect the final rate adjustments, or bill impacts, seen by the District’s customers. The overall revenue adjustment reflects the needed revenues for the system as a whole. A more detailed revenue requirement is included in Exhibit 3 of the Sewer Technical Appendix.

2.1.9 Consultant’s Conclusions

Based on the revenue requirement analysis developed herein, HDR recommends that the District adjust sewer revenues annually over the next five-year period (FY 2024 – FY 2028). HDR has reached this conclusion for the following reasons:

- Revenue adjustments are necessary to fund the District’s capital improvement needs
- The revenue adjustments are necessary in order to fund the annual inflationary costs related to annual sewer O&M
- The proposed revenue adjustments maintain the District’s strong financial health and provide long-term sustainable funding levels

In reaching this conclusion, HDR would recommend that the District adopt the proposed sewer rate revenue adjustments in order to provide sufficient funding for annual O&M and capital improvement program over the next five-year period.

2.1.10 Summary of the Sewer Revenue Requirement

This section of the Study has provided a discussion of the District’s sewer revenue requirement analysis. The revenue requirement analysis developed a revenue transition plan to support the District’s O&M and capital needs. The next section will discuss the cost of service analysis developed for the District’s sewer utility.

2.2 Sewer Cost of Service Analysis

In the previous section, the revenue requirement analysis focused on the total revenues and expenses required to adequately fund the District’s sewer utility. This section will provide an overview and summary of the cost of service analysis developed for the District’s sewer utility.

The sewer cost of service analysis is concerned with the proportional distribution of the total revenue requirement among the various customer classes of service (i.e., Residential, Multi-Family, Commercial) to establish cost-based and proportional rates for each customer class of service. The previously developed revenue requirement was utilized in the development of the cost of service analysis.

2.2.1 Objectives of a Cost of Service Study

There are two primary objectives in conducting a sewer cost of service study:

- Proportionally distribute the District’s revenue requirement among the customer classes of service; and
- Derive average unit costs (i.e., cost-based rates) for subsequent rate designs.

The primary objective of the cost of service analysis is the proportional and equitable manner to collect the revenue requirement from the District’s various customer classes of service. The second rationale for conducting a cost of service analysis is to allow for the development of proposed rates that properly reflect the costs incurred by the District and impacts customer place on the sewer system. For example, a sewer utility typically incurs costs related to flow (wastewater volumes), strength, and customer cost components. Each of these types of costs may be collected in a slightly different manner to allow for the development of rates that collect costs in the same manner as they are incurred.

2.2.2 Determining the Customer Classes of Service

The first step in a cost of service analysis is to determine the customer classes of service. The customer classes of service for the Study are based on the current rate schedules of the District. As part of the Study, HDR reviewed the customer classes with the District and determined they reflect the various customer types and system facility requirements. For purposes of the development of the cost of service analysis, the following customer classes of service were identified:

- Residential
- Multi-Family
- Commercial

In determining classes of service for cost of service purposes, the objective is to group customers together into similar or homogeneous groups based upon facility requirements and/or flow characteristics. HDR reviewed the current customer characteristics and facility requirements, and the proposed customer classes of service are consistent with typical industry practices.

2.2.3 General Cost of Service Procedures

In order to determine the proportional cost to serve each customer class of service on the District’s sewer system, a cost of service study is conducted. A cost of service study utilizes a three-step approach to review costs which is outlined in the Water Environment Federation Manual of Practice No. 27 (WEF MOP #27). These steps take the form of functionalization, allocation, and distribution. Provided below is a detailed discussion of the Study conducted for the District, and the specific steps taken within the analysis.

Terminology of a Sewer Cost of Service Analysis

Functionalization – The arrangement of the cost data by functional category (e.g., collection, pumping, treatment).

Allocation – The assignment of functionalized costs to cost components (e.g., volume, strength, and customer related).

Distribution – Distribute the allocated costs to each class of service based upon each class’s proportional contribution to that specific cost component.

Volume Costs – Costs that are allocated as volume related vary with the total flow of wastewater (e.g., power for pumping).

Strength Costs – Costs allocated as strength related refer to the sewer treatment function. Typically, strength-related costs are further defined as biochemical oxygen demand (BOD) and suspended solids (SS). Treatment facilities are designed and sized around meeting these treatment demands.

Customer Costs – Costs allocated as customer related vary with the number of customers on the sewer system, e.g., billing, accounting costs, etc.

Direct Assignment – Costs that can be clearly identified as belonging to a specific customer or group of customers.

2.2.3.1 Functionalization of Costs

The first analytical step in the cost of service process is called functionalization. Functionalization is the arrangement of expenses and asset (plant) data by major operating functions (e.g., collection, pumping, treatment). Within this Study, the District's records functionalized a majority of the expenses and assets. For those that were not, HDR worked with District staff to review and functionalize the expense or asset.

2.2.3.2 Allocation of Costs

The second analytical task performed in a sewer cost of service study is the allocation of the costs. Allocation determines why the expenses were incurred or what type of need is being met. The following cost allocators were used to develop the Study. These were the same allocation components as used in the development of the 2022 sewer rate study.

- **Volume Related Costs:** Volume related costs are those costs which tend to vary with the total quantity of wastewater collected and treated. A majority of collection system costs are included in this component as well as electricity used for pumping or treating wastewater.
- **Strength-Related Costs:** Strength-related costs are those costs associated with the handling and the treatment of wastewater. For the District's study, strength was differentiated between biochemical oxygen demand² (BOD) and total suspended solids³ (TSS). These constituents represent the strength factors that drive the District's treatment related costs. Increased strength levels of BOD or TSS equates to increased treatment costs for sewer treatment.
- **Customer-Related Costs:** Customer-related costs vary with the addition or deletion of a customer or a cost which is a function of the number of customers served. Customer related costs typically include the costs of billing, collecting, and accounting. Customer related costs can be further defined as weighted or reflect a higher cost of providing specific costs such as billing.
- **Revenue-Related Costs:** Some costs associated with the utility may vary with the amount of revenue received by the utility. An example of a revenue related cost would be a utility tax which is based on gross utility revenue.
- **Direct Assignment:** In some cases, a specific component of the infrastructure, or a specific O&M expense can be the direct responsibility of a specific customer class or classes. In this case, it is directly assigned to that customer class classes.

The basis, or methodology, for the allocation process is outlined in the WEF MOP #27. The methodology provided in the manual was then applied to the District's specific circumstances,

2 BOD is the amount of dissolved oxygen that must be present in water in order for microorganisms to decompose the organic matter in the wastewater.

3 SS is the entire amount of organic and inorganic particles dispersed in wastewater.

customers, O&M and capital costs, and system operation to develop the appropriate allocation approach in a similar manner as the 2022 sewer rate study.

2.2.3.3 Development of Distribution Factors

Once the allocation process is complete, the various allocated costs were distributed to each customer class of service. The District's allocated costs were proportionally distributed to the customer classes of service using the following distribution factors.

- **Volume Distribution Factor:** Volume related costs are distributed on the basis of contribution to wastewater flows. In order to develop this distribution factor, some knowledge of the contribution to flows must be determined. Wastewater flows were calculated based on billed wastewater flows for the District's customers which is based on metered water consumption. The calculation of the volume distribution factor is shown in Exhibit 7 of the Technical Appendix.
- **Strength Distribution Factor:** Strength-related costs are first allocated between BOD and TSS and then distributed to each customer class. The strength levels and each individual customer's wastewater volumes were used to calculate the pounds removed for each constituent which relates to each customer classes proportional contribution and share of costs. For the District's study, all customers were set at domestic strength wastewater levels. Exhibit 8 in the Technical Appendix provides the calculation of the strength distribution factor.
- **Customer Distribution Factor:** Customer costs within the cost of service analysis are distributed to the various customer classes of service based upon their respective number of accounts. The actual customer distribution factor assumes that there is no disproportionate cost associated with serving a customer (e.g., postage for bills is the same regardless of the size or usage of the customer). The other customer factor is called the customer capacity demand factor and is developed based on the number of equivalent meters for each customer class. This is meant to reflect the potential flows of each customer class. Exhibit 9 of the Technical Appendix provides the calculation of the customer distribution factors.
- **Revenue Related Distribution Factor:** The revenue related distribution factor was developed from the projected rate revenues for FY 2024 for each customer class of service as developed in Exhibit 3. A summary of the revenue distribution factor is provided in Exhibit 10 of the Technical Appendix.

The development of the distribution factors is based on generally accepted principles as outlined in the WEF MOP #27.

2.2.4 Functionalization and Allocation of Plant in Service

As noted, the first steps of the cost of service analysis are the functionalization and allocation of District's plant in service. In performing the functionalization of plant in service, HDR utilized the District's historical plant (asset) records. Once the plant assets were functionalized, the analysis shifted to the allocation of each asset. The allocation process included reviewing each functionalized asset and determining which cost allocator the assets were related to. For example, the District's assets were allocated as: volume-, strength- (BOD, TSS), customer-, and

revenue-related. Provided below is a summary of the allocation process for the functional categories. The functionalization and allocation of the sewer plant in service was based on the approach as established in the 2022 sewer rate study. Therefore, the relationships have been maintained between cost allocations and only the sewer costs have been updated.

A detailed exhibit of the District’s functionalization and allocation of plant investment can be found in the Technical Appendix Exhibit 11.1. Provided below in Table 2 - 4 is a summary of the allocation of the District’s plant in service (e.g., assets).

Table 2 – 4 Summary of the Allocation of Plant in Service						
	VOL	BOD	TSS	Cust.	CCD	DA
Collection	100.0%	0.0%	0.0%	0.0%	0.0%	0.0%
Treatment	50.0%	25.0%	25.0%	0.0%	0.0%	0.0%
General Plant	67.1%	16.5%	16.5%	0.0%	0.0%	0.0%

2.2.5 Functionalization and Allocation of O&M Expenses

Following generally accepted methodologies as outlined in the WEF MOP #27, operating expenses are generally functionalized and allocation in a manner similar to the corresponding plant account. For example, maintenance of the collection system is typically allocated in the same manner (percentages) as the plant account for the collection system. This approach to allocating the District’s sewer operating expenses was used for this analysis. The District has a functionalized O&M budget that identifies O&M expenses by function (e.g., treatment, maintenance). Given this, in general, the approach to allocating the operating expenses was based on the allocation of the plant, or asset data. As a note, there are exceptions to this approach so that the analysis results in an equitable allocation and proportional distribution of costs and reflects the District’s specific customer and system characteristics. One example is the capital charge component of the rate. For the District’s study this is allocated as capacity demand to reflect the potential demands each customer class can place on the system. In this way, the distributed costs reflect the manner in which these costs are recovered through the capital charge component of the rates.

For the District’s study, the revenue requirement for FY 2024 was functionalized and allocated based on the approach noted above. As noted earlier, the District utilized a cash basis revenue requirement, which was comprised of operation and maintenance expenses, rate funded capital, debt service, and reserve funding.

Provided in Table 2 – 5 is a summary of the allocation of the District’s FY 2023 test period revenue requirement using the methodology outlined in the WEF MOP #27 and the District’s specific facility requirements and operations.

Table 2 – 5
Summary of the Allocation of the FY 2024 Revenue Requirement (\$000's)

Total	Volume	BOD	TSS	Customer	CCD	RR / DA
\$8,421	\$1,477	\$348	\$348	\$0	\$6,248	\$0

Based generally accepted approaches, and the District’s specific costs and operation of the wastewater collection and treatment system, the revenue requirement of approximately \$8.4 million is allocated between the volume, strength, and customer related components. As noted, provided in Exhibit 13 of the Technical Appendix provides a detailed summary of the allocation of the District’s revenue requirement.

2.2.6 Summary of the Sewer Cost of Service Analysis

In summary, the cost of service analysis began by functionalizing the District’s sewer assets (infrastructure) and O&M expenses. The functionalized asset and expense accounts were then allocated into their various cost components.

As shown in Table 2 – 5 the total revenue requirement for FY 2024 has been allocated between the various cost components based on generally accepted methodologies. Next, the individual allocation totals are distributed proportionally to the identified customer classes of service based on the appropriate distribution factors as previously discussed. As an example, volume-related costs were distributed based on each customer classes share of total wastewater contributions. The total costs allocated to each cost component were proportionally distributed between the customer classes using the previously mentioned distribution factors. Provided in Table 2 – 6 is a summary of the distribution of the revenue requirement to the customer classes of service.

Table 2 – 6
Summary of the Distributed of the FY 2024 Revenue Requirement (\$000's)

	Total	Residential	Multi-Family	Commercial
Volume	\$1,477	\$569	\$578	\$330
BOD	348	134	136	78
TSS	348	134	136	78
Actual Customer	0	0	0	0
Cust. Capacity Demand	6,248	2,704	2,994	551
RR	0	0	0	0
DA	0	0	0	0
Total	\$8,421	\$3,541	\$3,844	\$1,036

The total distributed costs are then compared to the current revenues of each class of service to determine the overall change in revenues needed from each class of service to reflect the

proportional distribution of costs. Provided in Table 2 – 7 is a summary of the cost of service analysis for the District’s Study.

Table 2 – 7 Summary of the Sewer Cost of Service Analysis (\$000)				
Class of Service	Current Rate Revenues	Distributed Costs	\$ Difference	% Difference
Residential	\$3,197	\$3,541	(\$344)	10.8%
Multi-Family	3,299	3,844	(545)	16.5%
Commercial	<u>923</u>	<u>1,036</u>	<u>(113)</u>	12.2%
Total	\$7,420	\$8,421	(\$1,002)	13.5%

The results of the cost of service analysis indicate very minor cost of service differences between the customer classes of service. This is in part, due to the cost of service adjustments implemented during the 2022 rate study, specifically the development of a specific rate for the commercial customers. A general rule of thumb when evaluating the results is to look at +/- 5% of the overall system adjustment (i.e., 13.5%). When reviewing the results of the cost of service analysis, it is important to understand that the results will not be “exact” each time the District updates its cost of service analysis. This is due to changing customer wastewater characteristics, external impacts such as the area demographics and customer types, and other changes in how the District incurs costs. Given the results, in discussion with the District, there are no cost of service adjustments proposed at this time.

The development of the cost of service is provided in Exhibits 7 through 15 of the Sewer Technical Appendix.

2.2.7 Consultant’s Conclusions

As noted, the results of the cost of service analysis show that only minor cost differences exist between the various customer classes of service. It is important to note that the cost of service relationships will change over time as customer characteristics and costs change over time.

2.2.8 Summary

This section of the Study has provided a summary of the cost of service analysis developed for the District. This analysis was prepared using generally accepted cost of service techniques and principles. The next section of the Study will review the present and proposed sewer rates for the District.

2.3 Sewer Rate Design Analysis

The final step of the District’s sewer rate study is the design of rates to collect the desired levels of revenue, based on the results of the revenue requirement analysis. In reviewing District’s rates, consideration is given to the level of the rates and the structure of the rates.

2.3.1 Rate Design Criteria and Considerations

Prudent rate administration dictates that several criteria must be considered when setting utility rates. An example of some of these rate design criteria are listed below:

- Rates which are easy to understand from the customer’s perspective
- Rates which are easy to administer by the District
- Consideration of the customer’s ability to pay
- Continuity, over time, of the rate making philosophy
- Policy considerations (encourage efficient use, economic development, etc.)
- Provide revenue stability from month to month and year to year
- Promote efficient allocation of the resource
- Cost-based sewer rates
- Compliance with State law

When developing the proposed rate designs, all the above-listed criteria were taken into consideration. However, it is difficult, if not impossible, to design a rate that meets all the goals and objectives listed above. For example, it may be difficult to design a rate that takes into consideration customers’ ability to pay, and one which is cost-based. In designing rates, there are always trade-offs between these various goals and objectives.

2.3.2 Overview of the Present and Proposed Sewer Rates

The District currently has a monthly fixed charge for all customers that is charged by service meter size. There is also a capital improvement charge which is also charge based on the service meter size. A flat administration fee is charged per account. Finally, there is a uniform sewer use rate charged on all use for commercial customers. Residential (Single family and Multi-Family) are charge the same uniform rate but only on usage up to the winter water average as calculated on use from December to April. In discussion with District staff, no rate structure changes to the sewer rates are being proposed at this time. However, a unique volume charge (sewer use) is maintained for residential and multifamily customers as well as the commercial customer class which reflects the costs of providing service. Provided in Table 2 - 8 is a summary of the current and proposed sewer rates.

Table 2 - 8
Summary of the Present and Proposed Sewer Rates

	<i>Present Rates</i>	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028
Base Charge						
3/4"	\$25.10	\$32.25	\$36.50	\$40.00	\$42.25	\$44.25
1"	41.92	53.86	60.96	66.80	70.56	73.90
1 1/2"	83.58	107.39	121.55	133.20	140.69	147.35
2"	133.78	171.89	194.55	213.20	225.19	235.85

Commercial	4.70	5.60	6.35	6.95	7.10	7.37

As a point of reference, residential customers (single family and multi-family) are charged the 3/4" rate for the base and capital improvement charges per living unit. All commercial customers are charged based on the meter size.

2.4 Summary of the Sewer Rate Study Update

This completes the analysis for the District’s sewer utility. This study has provided a comprehensive review and development of proposed sewer rates for the District. Adoption of the proposed sewer rates will allow the District to meet its current and projected financial obligations for the time period reviewed based on the assumed customer growth, capital plan and deferred capital, and inflationary increases in operating costs. Should these assumptions change, the proposed rate adjustments may also need to be revised to reflect the current conditions.

Utility Rate Study Update Recommendations

June 14, 2023

Establishing Cost-Based Water and Sewer Rates

Summary of the Revenue Requirement Analyses

- Rate revenue adjustments are necessary to:
 - ✓ Adequately fund current and future O&M expenses
 - ✓ Fund capital improvement needs and annual debt service payments
 - ✓ Meet District financial policies (target reserves, etc.)
- Overall system revenue adjustments are similar, slightly less, than the 2022 study results for the same years
- Overall system revenue adjustment may not equal customer bill impact
 - ✓ Implementation of the cost of service results and rate design goals and objectives

Projected Monthly Revenue / Rate Adjustments

	FY 2022	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027
Water						
Avg Customer Bill ¹	\$54.98	\$59.39	\$64.19	\$69.17	\$73.34	\$73.70
Monthly Change		4.41	4.80	4.97	4.18	0.35
Sewer						
Avg Customer Bill ²	\$72.78	\$82.39	\$88.72	\$93.99	\$96.84	\$99.76
Monthly Change		9.61	6.33	5.26	2.85	2.92

1] – Based on 10,000 gal and base charge, capital improvement, admin fee, and defensible space

2] – Based on 3,000 gal and base charge, capital improvement, and admin fee

Summary of the Cost of Service Analysis

- Some cost differences exist between the customer classes of service
 - ✓ Reflects customer and system characteristics
 - ✓ Characteristics change over time
- Water utility impacts
 - ✓ Driven by peak use by customer classes (irrigation customers)
- Sewer utility impacts
 - ✓ Minimal and within a reasonable range
- Cost of service is a single point in time
 - ✓ Minor revisions for this study as a result of the prior study adjustments
- Recommend additional adjustment to irrigation customer rates to reflect the cost of service results

Comparison of Current and Proposed Water Revenues

	FY 2023	FY 2024	FY 2025	FY 2026	FY 2027	FY 2028	Total % Change
Residential and Commercial							
Projected Revenue		\$5,616,210	\$6,101,066	\$6,593,777	\$7,010,429	\$7,025,064	35.2%
COSA Revenue	\$5,196,857	\$5,578,098	\$6,052,236	\$6,536,415	\$6,732,508	\$6,934,483	33.4%
% of Total Revenue	88.0%	86.3%	86.1%	86.0%	86.5%	86.3%	
Irrigation							
Projected Revenue		\$890,921	\$983,663	\$1,073,229	\$1,096,763	\$1,119,615	58.4%
COSA Revenue	\$706,810	\$915,935	\$993,789	\$1,073,292	\$1,105,491	\$1,138,656	61.1%
% of Total Revenue	12.0%	13.7%	13.9%	14.0%	13.5%	13.7%	
System Total	\$5,903,666	\$6,507,131	\$7,084,729	\$7,667,006	\$8,107,192	\$8,144,678	38.0%

- Sewer cost of service adjustments are equal for all customers for each year
 - ✓ No cost of service adjustments

Summary of the Rate Design Analysis

- Cost of service results:
 - ✓ Water cost of service differences still exist
 - Irrigation customers
 - ✓ Minimal sewer cost of service differences
- Recommend maintaining current rate structure
 - ✓ Only the level of the rates are adjusted
- Proposed rates increases fixed revenues
 - ✓ Reflects increased fixed costs incurred to fund capital needs

Local Monthly Combined Residential Bill Comparison

*Rates include TTSA charge for wastewater treatment services

Thank you
